

8 AI software helps users create apps and design websites without coding skills

With the incredible development of AI, anyone can now create their own applications (apps) and websites without needing to know programming or coding.

Below are 8 artificial intelligence (AI) software for common users without programming knowledge.

1. Appy Pie

Appy Pie is a generative AI software. It allows users to create applications and websites without coding or technical programming skills. With a simple drag and drop interface, users can easily design and customize their app or website.

2. Winr

Winr will automatically turn the website into an application. Users can collect service payments through the website, send push notifications, list e-commerce products, and directly index the Apple and Android app stores.

3. Mobincube

With Mobincube, users can create and publish their mobile apps without coding knowledge. The platform offers a drag-and-drop interface as well as a variety of templates and design elements to help users build and customize apps based on their needs.

4. Zoho Creator

With Zoho Creator, users can create applications for a variety of business administration goals, such as data collection, workflow management, customer relationship management, and project management.

5. Mendix

For creating a simple mobile app or a more complex enterprise-level application, Mendix is the complete solution. It combines the power of using design tools with agile design methods that businesses can use.

6. Pico

Pico is a GPT4-based 'text-to-app' platform developed by WhimsyWorks. It allows users to convert natural language into code, allowing the creation of web applications using only simple English text – so it is the easiest solution to use.

7. Bubble

Bubble allows users to create interactive, multi-user applications for desktop and mobile devices without the need for coding skills. It offers a drag and drop interface as well as many pre-built templates and plugins,

making it easy for users to build and customize their apps.

8. Softr

Softr allows users to enter text prompts (prompts) to create apps - so you don't need advanced technical skills to create premium apps. For example, a user can enter a prompt and it will create a copy of the website and images.
