

8 apps identify everything with the phone camera

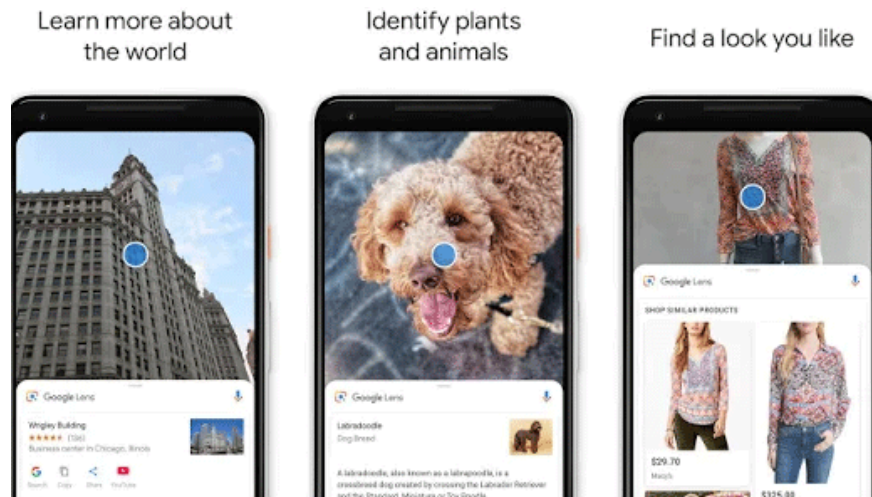

Camera smartphone also functions as an image search engine and identifies everything you see in the world. Here are the best things to identify apps for Android and iPhone.

The phone camera has a lot of uses besides taking photos and videos. It can make everything true with the AR application. And the smartphone camera also functions as an image search engine and identifies everything you see in the world. Here are the best things to identify apps for Android and iPhone.

1. The best camera app for Android
2. Some tips and tricks on using Camera on iPhone (part 1)
3. 5 "must-have" selfie apps on Android phones

1. Google Lens: Determine everything

1. Download Google Lens for Android
2. Download Google for iPhone

Google has put their search engines in your camera. Google Lens can identify tons of objects such as animals, plants, flowers, branded utensils and more except humans.

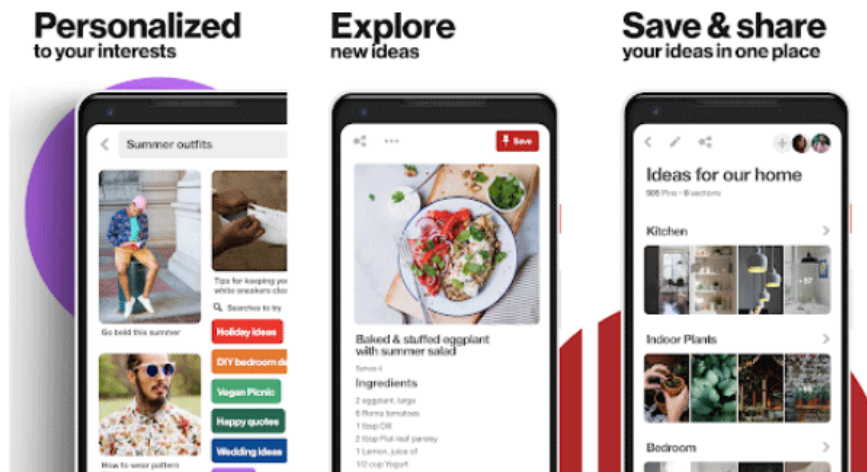

Also, for compatible objects, Google Lens will also open shopping links if you want to buy them. You just need to download the application or launch it from Google Assistant and point to the item to identify. Google Lens will tell you if it identifies the object by displaying a small blue icon on the top of the object.

iPhone users can find Google Lens in the search bar of the main Google application.

1. Using Google Lens to convert images into words, find information easily

2. Pinterest: Design and art

1. Download Pinterest for Android
2. Download Pinterest for iOS

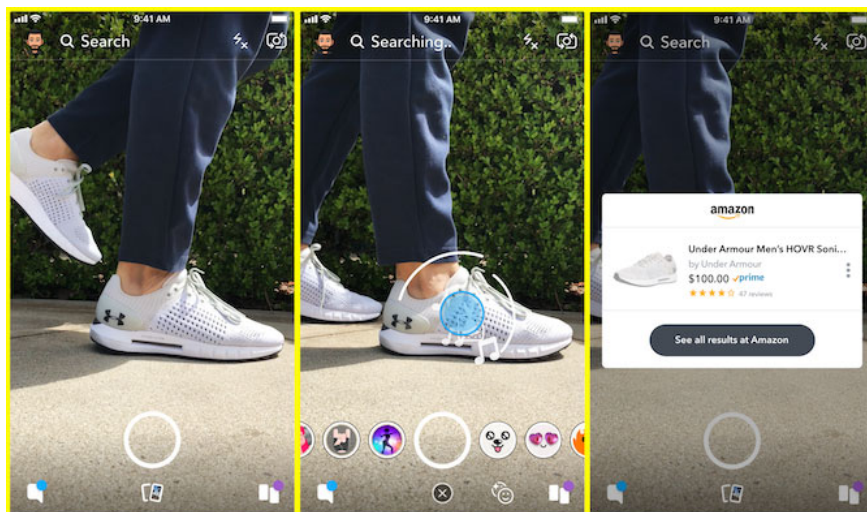

Similarly, Pinterest has a search engine for the images you take with the camera and it will find links and pages for the object it identifies. Pinterest can identify many objects in a complex picture like an outfit.

Like Google, it will show you a shopping link so you can directly buy the product. Pinterest's image search engine is primarily designed to identify similar outfits, designs and categories. For the purpose of exploring nature, you should use Google Lens.

3. Snapchat: Search for images provided by Amazon

1. Download Snapchat for Android
2. Download Snapchat for iOS

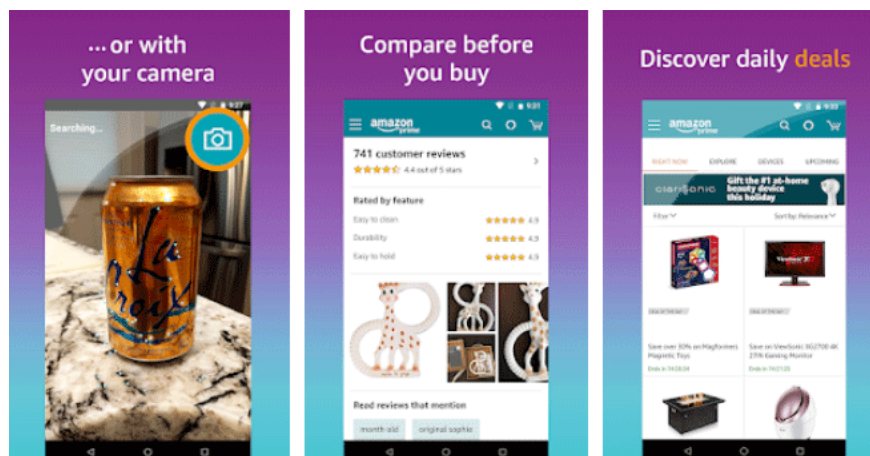

Snapchat comes with a handy image search tool. It is provided and integrated with Amazon product databases.

Take a photo of the product you are interested in so that Snapchat identifies and issues an Amazon card so you can access the shopping list. In addition, you can also scan barcodes instead of touching objects to search faster.

4. Amazon: For shopping

1. Download Amazon for Android
2. Download Amazon for iOS

If you don't use Snapchat, you can switch to the official Amazon app. Search by taking product photos or barcodes.

To search for a product, select the option on the right side of the search bar, with the camera icon to take a picture. If the corresponding result is found, Amazon will give the list available. However, you cannot export the captured image to the photo library on your phone.

5. Coinoscope: Identification of coins

1. Download Coinoscope for Android
2. Download Coinoscope for iOS

If you are a coin collector, Coinoscope is definitely the app you are looking for. It can identify both ancient and modern coins.

Coinoscope works by analyzing the photos you take and displaying relevant results from its archives. In addition to identifying names, Coinoscope also provides additional information such as five types of coins that are put into circulation, origin, value and more.

6. PlantNet: Plant identification

1. Download PlantNet for Android
2. Download PlantNet for iOS

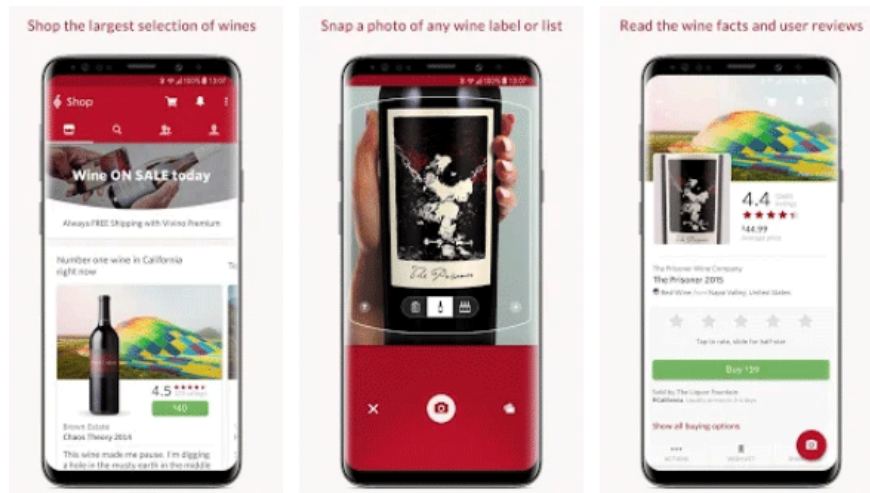

Another suitable image search tool is PlantNet. From the name you may also know this application will identify all plant species. PlantNet can identify plants, flowers, grasses, cacti and many other species.

After entering an image, PlantNet will display a few similar lists. You can confirm and choose a species that seems closest to what you are looking for. In addition to providing the name of the plant, PlantNet also brings the scientific information and facts about the species you are viewing.

1. How to identify flower names by phone camera

7. Vivino: Identify wine brands

1. Download Vivino for Android
2. Download Vivino for iOS

Next on this list is Vivino, an app that helps you buy better quality wine. All you need to do is take a picture of the alcohol brand you care about.

Vivino will then process and provide some information to help you decide whether to buy it or not. It provides information on popularity, description of flavors, ingredients, age and more. In addition, you can see user reviews, queuing from Vivino's 30-million community.

Even in some areas, Vivino offers you incentives and helps locate the store where you can buy the wine at the cheapest price. Vivino has now introduced about 9.2 million wines.
