1. Science proves: Father's bad mood seriously affects children's development
2. 8 fun, simple crafts for babies this summer
3. Ask your child these 4 questions every day, if you want to understand them better

A child develops and learns about the world around them through games, but there are many dangerous toys that can harm them rather than benefits. On the Bright Side page listed a list of **8 dangerous toys that parents need to consider carefully before buying them** with tips on how to choose safe toys. Invite you to consult!

1. Toy with propeller

© depositphotos

Helicopters and other propeller toys are often designed for children aged 10 and older. However, if young children do not know how to handle the propeller properly, they may be injured in the finger if touching the running fan, in many cases the rotor may scratch the body or even break. young hands.

1. **Tip** : When buying this toy, you should choose the propeller made of soft plastic, plastic plastic. In addition, the edges of the impeller are rounded, not too sharp or have any cracks to ensure safety for

children.

2. Doctor toys

© depositphotos

Children often enjoy using this toy for "examination" for themselves, for other children and a certain item may be **stuck in the child's nose or airway**. This is an accident that can happen when children play this item. Besides, these games also stimulate the curiosity of children for syringes, scissors, and medicine. and they will approach as soon as possible.

1. **Tip** : It is best to use a toy that does not have any small parts, needles or tools to "examine" the nose or mouth.

3. Rubber ring and hand float

© depositphotos

Rubber rings and hand floats do not guarantee absolute safety for children in the water because they can easily slip out or slip out of their hands. In addition, some of these products contain toxic isophorone, phenol and hexanone, which can cause prolonged skin irritation and other problems. These substances also belong to the top group of cancer causing substances.

1. **Tip** : Float size must be adjusted in accordance with the physique of the child and used under adult supervision. Children should not use them continuously for more than half an hour.

4. Toys with batteries

© depositphotos

Pin buttons (*round pin*) look very similar to candy and your kids will want to taste them immediately. The size and shape of the button battery makes it easy for children to swallow. Lithium inside the battery can cause severe poisoning and burns. Therefore, you should store the battery carefully, away from children.

1. **Tip** : Batteries should be protected by fixed plastic plates with screws so that they cannot be removed.

5. Toy gun

6. Assembled magnet set

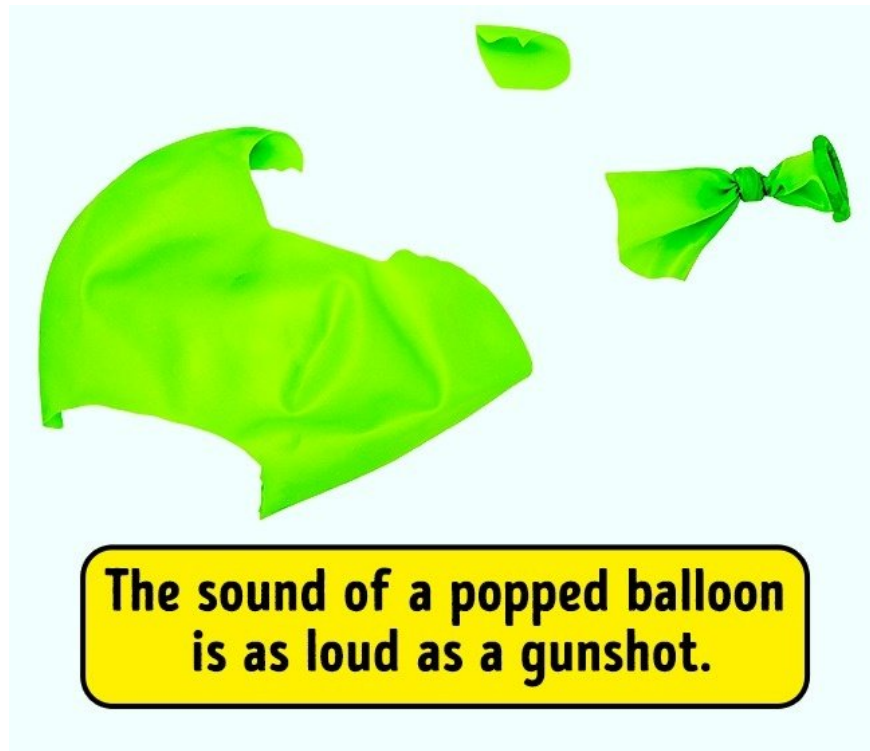

© depositphotos

This popular toy is usually labeled 3+ but in fact, it should be for teenagers over 14 years old. When the mouth is used to remove balls, **a few magnets are often swallowed** . When entered into the intestine, these magnets bind together and flatten the intestinal wall.

1. **Tips:** Magnet toys must be protected with a sturdy plastic cover to increase safety.

7. Balloons

A ball can suddenly explode during play, making the child feel scared or even hearing loss. While frightened, the child may accidentally inhale the debris of the balloon and suffocate. Some accidents that happened have shown that children suffer serious burns because balloons explode. That's why any ball-related event is recommended for children over 8 years old.

1. **Tips :** Do not buy wrinkled balls and strong smells because they use toxic recycled plastic.If you hold a ball of low quality, it will sound like a crumple and it will take a while for them to return to their original shape.Pleaseconsider choosing good quality for safety.

8. Fidget spinner

© Kelly Rose Joniec / Facebook

A part of the gyroscope can be removed and cause injury to the child. There are also children who swallow the part of the gyroscope. In addition, this toy is said to make children unable to concentrate, thereby affecting learning. In some US states, schools have banned students from using this toy at school.

1. **Tips** : Let children use finger training devices instead of Fidget spinner to be able to develop fine motor skills.

How to choose safe toys

A non-governmental organization called *World Against Toys* (*World Against Toys Causing Harm - WATCH*) regularly updates the list of **10 dangerous toys every year** and you can find many useful information from there. In addition, there are many useful proposals made by the **European Child Safety Alliance (ECSA)** . Which includes:

1. **Size** : Any toy must be no less than 6cm long and 3cm wide. If the toy is round, the diameter must not be less than 5cm.
2. **Colors** : Avoid toys with colorful colors. Special bright yellow is not recommended.
3. **Shape and material** : Toys should not have sharp edges, large holes or spaces - where a child's finger may be stuck. Parents should choose for children a cloth or wood and colorless toy.
