

8 types of plants that resist ultra-good electromagnetic radiation for those who regularly use computers

In addition to decorative effects, these plants also work to prevent harmful rays from technology equipment.

Today computers are a useful tool, widely used in offices, students . besides the positive aspects of computers, it also brings many negative effects for users. . People who are frequently exposed to computers often experience dry, dull skin and acne, which are the harmful effects of heat radiation from computers. Besides, heat radiation also has a significant impact on the brain. Therefore, to limit the amount of heat radiation caused by computers, you can use some types of ornamental plants in addition to decorating the work table, it also works to prevent harmful rays from public devices. technology especially computers and phones.

1. Cactus

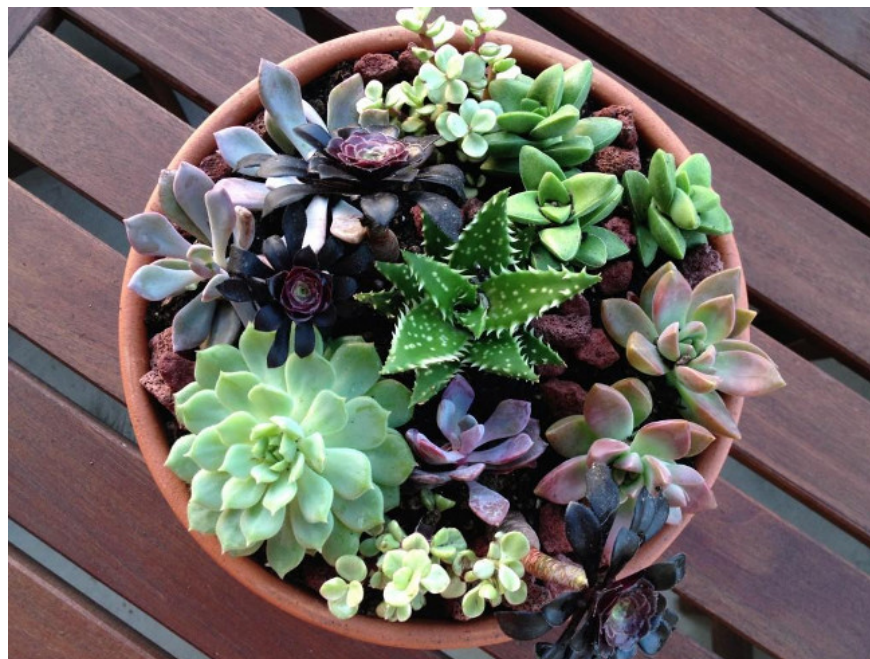

Cacti will be a perfect choice in this case. This is the most popular and most easily grown crop. They can live well in all different environmental conditions. Placing the cactus at the desk, it not only helps your desk to become green but also helps greatly limit the radiation damage to your health. However, cacti are sun-loving, so every week you should remember to bring sun exposure once for cacti to grow better.

2. Spring wire

The ivy is a shade-loving plant, which will be very suitable for indoor cultivation. Especially this plant does not need any fertilizer, or special care but can still grow green. You just need to choose the desired plant pots, put at the desk or in the window is also help to absorb a lot of radiation harmful to you already.

3. Stone lotus

Stone lotus is also a suitable choice for you to prevent heat radiation from your computer. This is a small, beautiful, succulent plant that is easy to grow and care for. Therefore, you will not take too much time to care for trees like other plants.

4. No betel nut / betel nut

The betel nut tree is a very popular tree which has the effect of absorbing radiation and toxic gas in the house very effectively. Just placing a few pots of betel nut in the house or on the desk is enough for the air to become fresher and healthier. In particular, this plant is extremely hydrophilic, so you can grow it without water. More interestingly, it is possible to combine several gold fish in the water to make it more vivid and beautiful.

5. Spider tree

This spider plant has the same function as the betel tree. In addition to absorbing huge pollution, purify harmful gases in the home for a short time. Spiders can also convert emissions causing cancer in the air like formic Aldehyde into sugar and ammonia gas. This spider tree grows very strongly, after a while the plants will grow seedlings, now you can separate the seedlings to plant in other pots to give to friends or colleagues.

6. Aloe tree

Aloe vera can be considered a "medicinal god" for everyone to use. In addition to beauty for women, aloe plants can also be used to cook tea, kill harmful bacteria in the air, absorb unpleasant odors, purify the air, and especially extremely good computer radiation smoking. This is a succulent plant, easy to grow, even if you go home to leave it for a whole month, it still lives well. Therefore, this plant is also a suitable choice for those who are quite busy.

7. Tiger blade

If you are someone who does not have much time to take care of ornamental plants, but still wants a pot of plants that can resist computer radiation, the tiger blade is a perfect choice for you. The tiger blade is an extremely tough plant that can be grown with water or soil. However, because the tree is very fast to grow, if you just want

a pretty little tree to work on, take a little tree.

8. Narcissus plants

Narcissus flowers often bloom in the spring and are the best choice for absorbing harmful radiation. Moreover, daffodils are not only beautiful but also good for health.

What are you waiting for without "buy now" one of the above bonsai pots, just decorate your desk more freshly and extremely useful in absorbing radiation rays that are harmful to your health? friend.
