

# 8 ways to open Advanced Startup Options on Windows 10

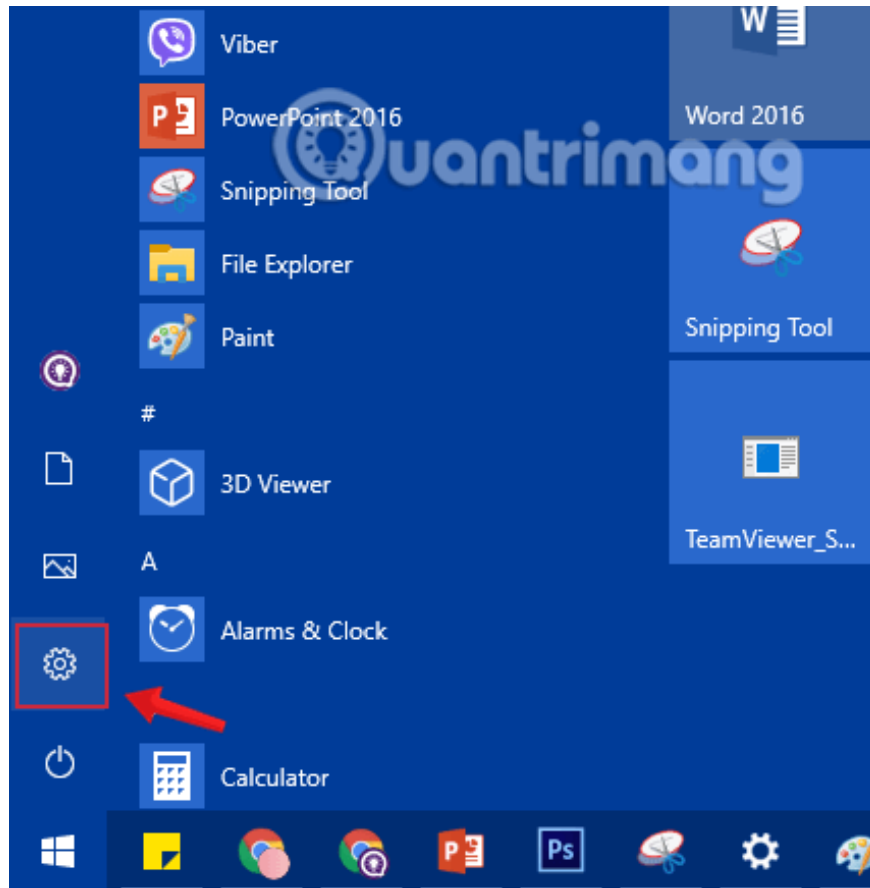

By navigating to Advanced Startup Options, you can reset Windows 10, restore Windows 10, restore Windows 10 from an image file you created previously, fix startup errors, open Command Prompt to perform options choose different, open UEFI settings, change Startup settings....

The **Advanced Startup Options** option on Windows 10 allows users to access available Startup settings and recovery options.

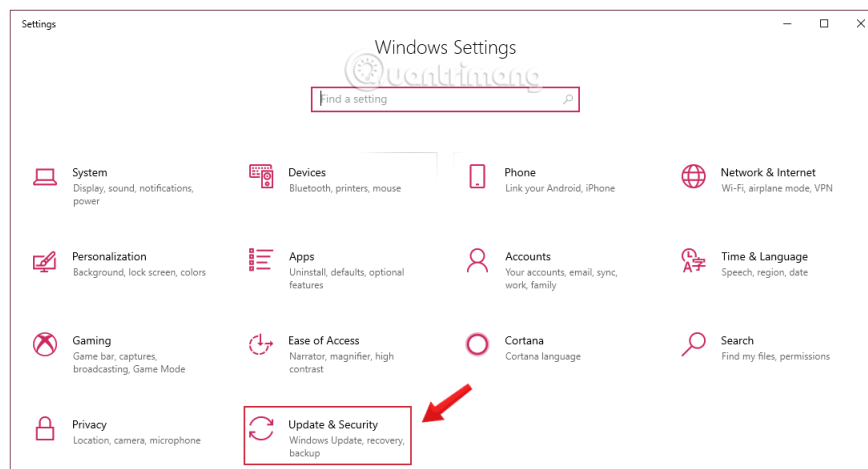

## 1. Open Advanced Startup Options using Settings

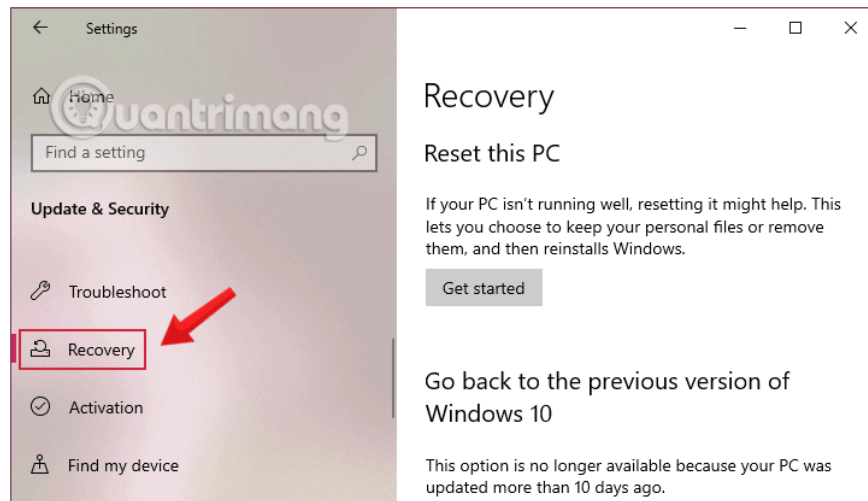

**Step 1:** Open the Settings application by clicking the **Settings icon on the Start menu** or **pressing the + key combination .WindowsI**

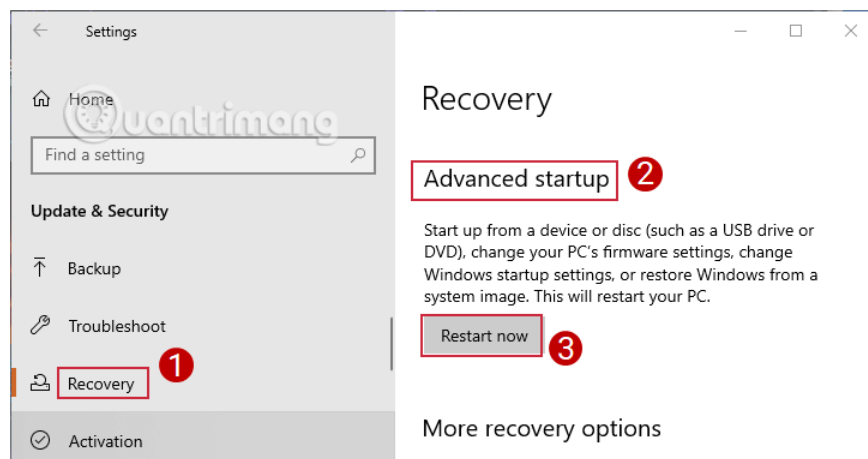

**Step 2:** On the Settings interface , click **Update & security**.

**Step 3:** Under **Update & security**, click **Recovery** from the left pane of the window.

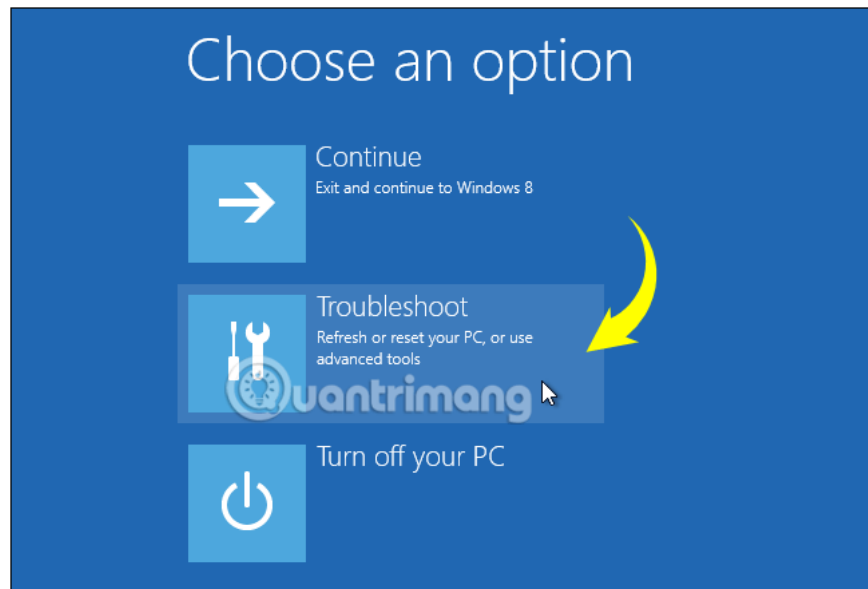

**Step 4 :** Next, in the right pane of the window, click **Restart now** in the **Advanced startup** section.

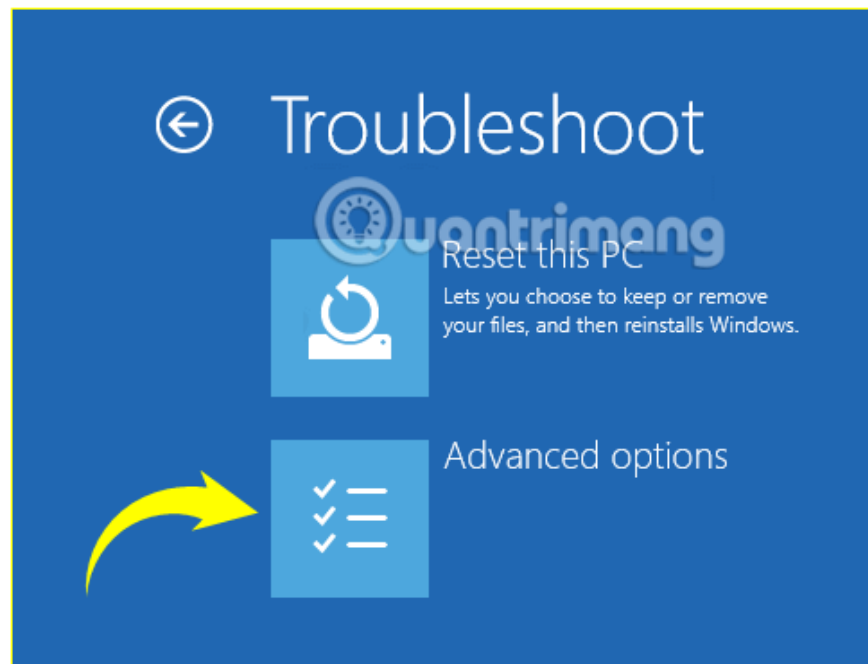

Your computer will now restart.

**Step 5:** After your computer has restarted, you will see the Choose an option screen appear, where you click **Troubleshoot**.

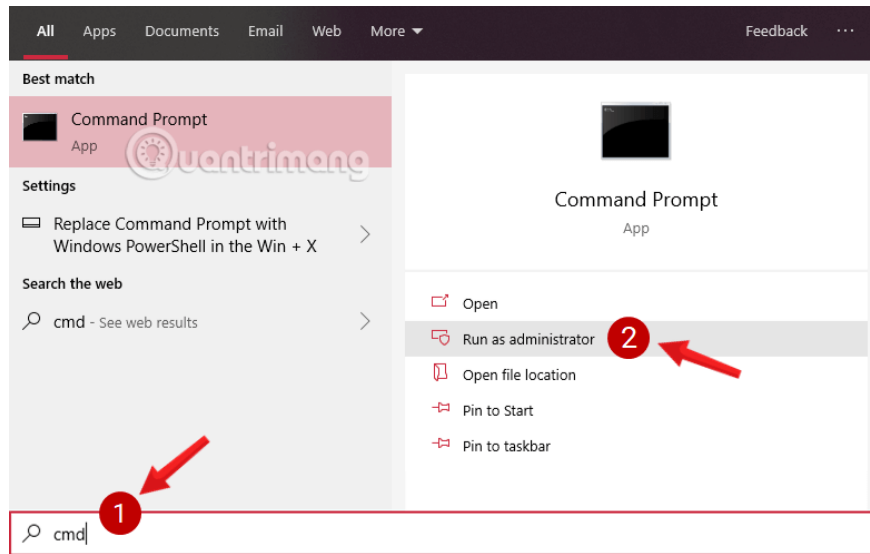

**Step 6:** On the Troubleshoot screen, click **Advanced options** to access the **Advanced Startup Options** option.

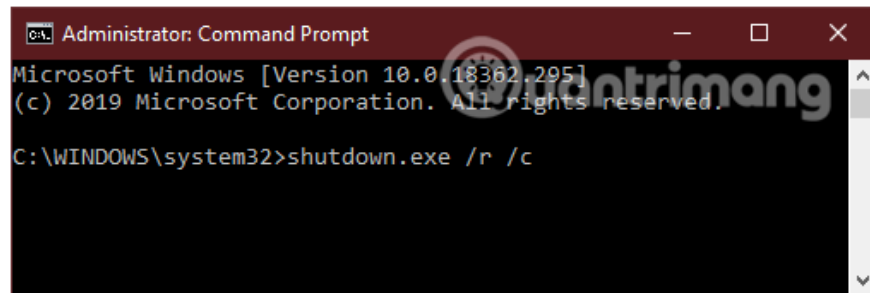

## **2. Open Advanced Startup Options using Command Prompt**

**Step 1:** Open Command Prompt under Admin.

**Step 2:** On the Command Prompt window , enter the command below and press Enter:

```
shutdown.exe /r /o
```

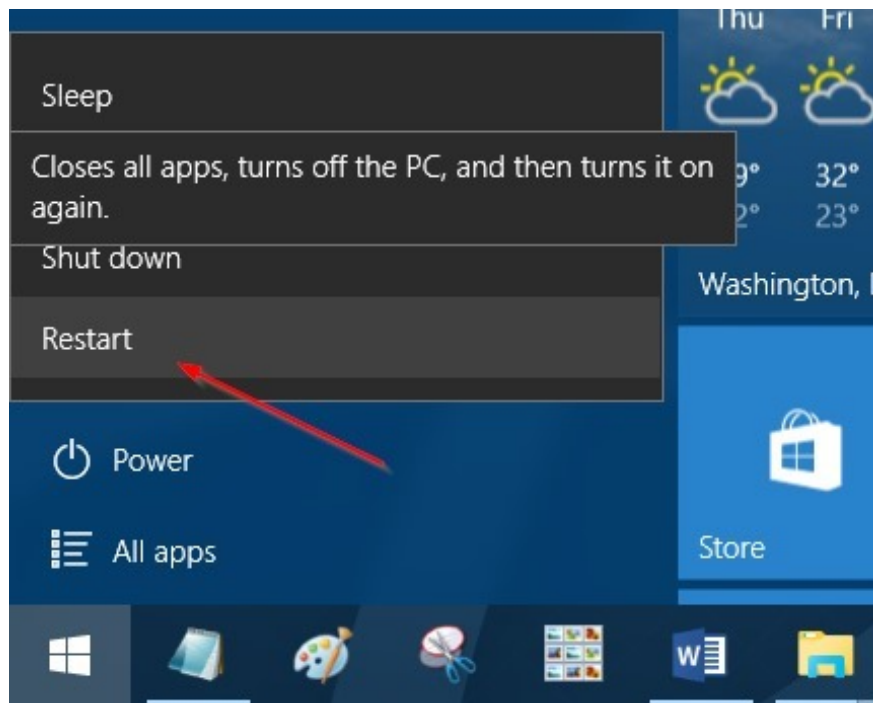

You will see a message showing that you are signing out, Close **the** message and wait a moment, Windows 10 will reboot into the **Advanced Startup Options** menu you need.

### 3. Open Advanced Startup Options from Windows 10 Desktop

**Step 1:** Open Start Menu, then click the **Power button**.

**Step 2:** Press and hold the **Shift** key , then click **Restart** to restart your computer. You will now see the Choose an options screen.

**Step 3:** On the Choose an option screen, click **Troubleshoot** to open the Troubleshoot screen, where you click **Advanced options** to access **Advanced Startup Options**.

## 4. Open Advanced Startup Options from the login screen

**Step 1:** On the login screen, click the **Power** button , press and hold the **Shift** key then click **the Restart option**.

**Step 2:** Next on the **Choose an option** screen , click **Troubleshoot** then click **Advanced options** to access **Advanced Startup Options**.

## 5. Open Advanced Startup Option from Boot Menu

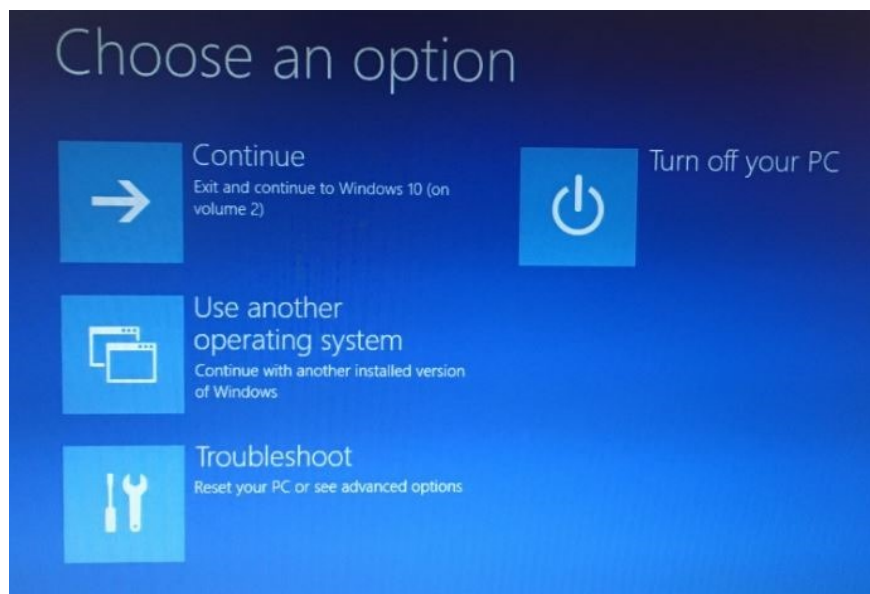

**Step 1:** Open your computer or restart your computer. When you see the Choose an operating system screen, click the **Change defaults or choose other options** option .

**Step 2:** Next on the Options screen, click on the **Choose other options** option .

**Step 3:** Next you will see the Choose an option screen. Here you click on **Troubleshoot**.

**Step 4:** Finally on the Troubleshoot screen, click **Advanced options** to open Advanced Startup Options.

## 6. Go to Advanced Startup Options from the Windows 10 installation media

**Step 1:** Insert the DVD or USB containing the Windows installation file into the computer.

You can borrow a Windows 10 installation disc (or other media) from someone you know if needed. You do not install or reinstall Windows, but only access Advanced Startup Options, no product key or license is required.

**Step 2:** Boot from the installation disc or USB device.

**Step 3:** Select **Next from the Windows Setup** screen .

**Step 4:** Select **Repair your computer** at the bottom of the window.

**Step 5:** **Advanced Startup Options** will launch, almost immediately.

## 7. Boot into Advanced Startup Options from the Windows 10 recovery drive

**Step 1:** Insert the Windows 10 recovery drive into the available USB port.

Don't worry if you've never created a recovery drive. If you have another computer with the same version of Windows or can borrow a friend's Windows 10 computer, see: [How to create a Windows 10 recovery drive for instructions](#).

**Step 2:** Boot the computer from USB.

**Step 3:** **On the Choose your keyboard layout** screen , select **US** or any keyboard layout you want to use.

**Step 4:** **Advanced Startup Options** will start immediately.

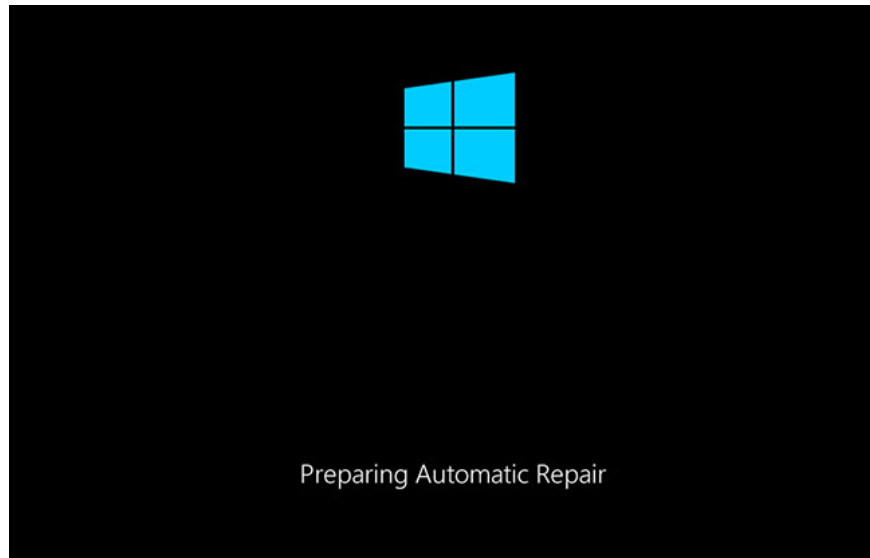

## 8. Access Advanced Startup using Automatic Repair

If Windows 10 doesn't start on your device and you don't have the operating system installation files, you can follow these steps:

**Step 1:** Press the power button.

**Step 2:** Immediately after Power-On Self-Test (POST), when you see the blue Windows logo, press the power button again to turn off the device.

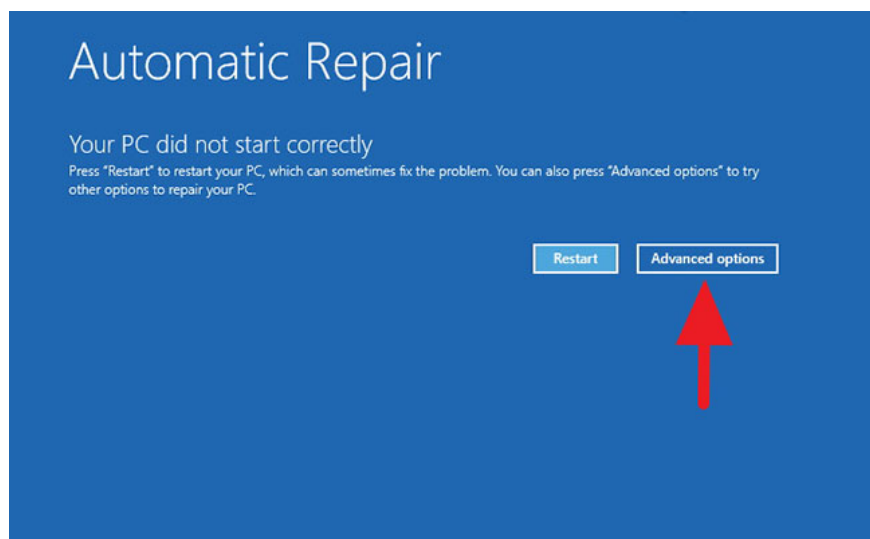

**Step 3:** Repeat steps 1 and 2 twice. On the third reboot, the operating system will enter the Windows Recovery Environment (Windows RE), where some diagnostics will be performed to try to fix any startup problems, but you will also see an option to access **Access Windows Startup Settings** .

**Step 4:** Select your account and enter the corresponding password.

**Step 5:** Click the **Continue** button.

**Step 6:** Click the **Advanced startup** button to continue.

After you complete the steps, Windows 10 will open the Advanced startup environment.
