

# 9 bizarre human abilities that only 10% of the population can do

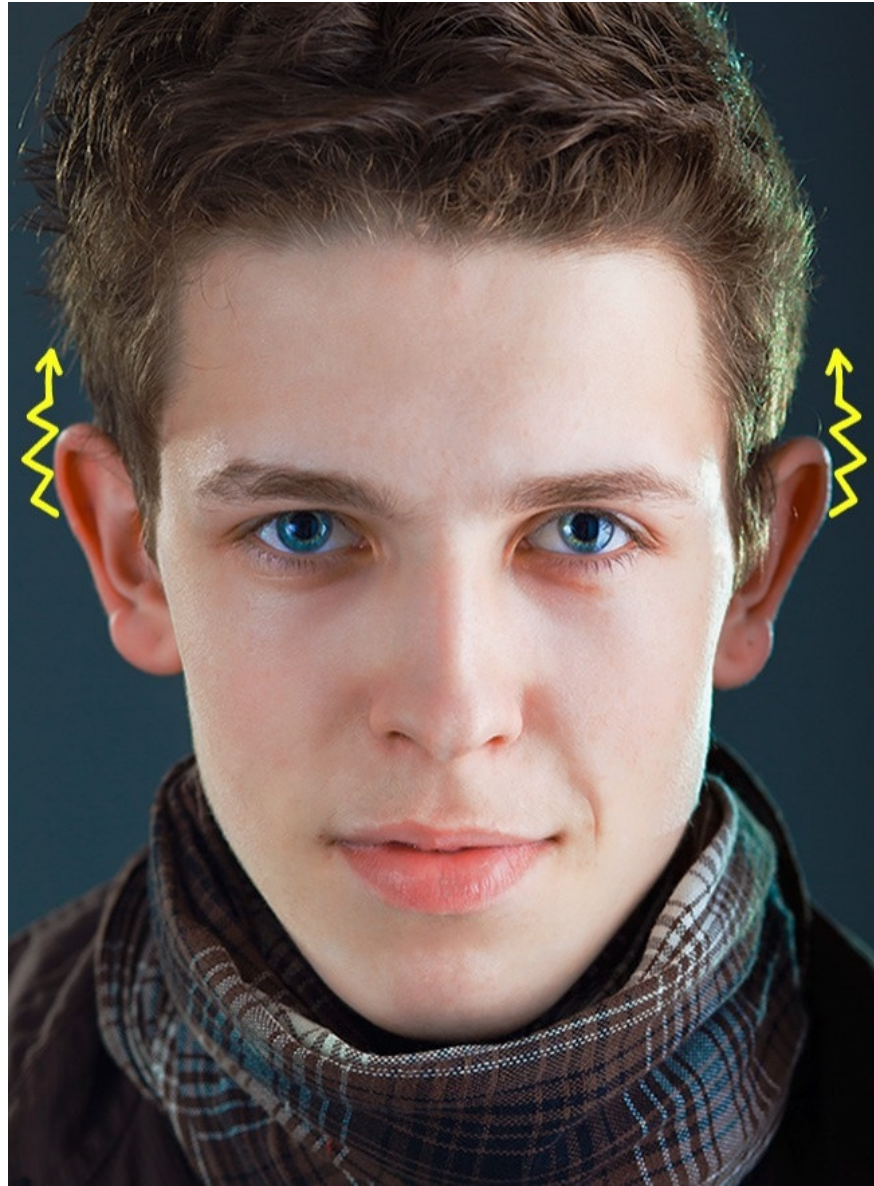

Try checking how many 'different' features you have below!

1. Medical mystery: The girl miraculously revived after a night of freezing
2. 11 mysteries happen in the body when we sleep
3. Cold with the mysterious stories about the "ghost of the living"

The people we are born have different physical or geographical structures. However, there are people outside that normal structure who also possess their own special innate skills that other people never get.

Here are 9 unique abilities and characteristics that not everyone has. Try to check how many features your body possesses, if you own this 5/9 score, congratulations, you are not a normal person but a mutant living on this earth already. .

## 1. The ear can move

According to studies, over the world population only 22% of people have the ability to make one ear move, and 18% can move both ears.

Since primitive times, our ancestors have not evolved yet, the ears and other parts of the body still move. But, as time progresses, people gradually evolve better, the muscles moving in the ear are gradually lost, because it has no effect in life.

## **2. Has the ability to slide each toe one by one**

Try to move your toes to see, certainly not possible, because when one finger is moved, all other toes follow.

The explanation for this possibility is that only the big toe and toes have their own muscles, while the remaining toes share the same muscle. Therefore, very few people have the ability to move independently of all toes without affecting the remaining fingers, especially the 3 middle fingers.

### **3. Licking the elbow**

Can you lick the elbow? This question if anyone first hears will definitely raise their hand to try it right away, without hesitation. But in fact 99% of us humans cannot lick the elbow. Do you know why I can't do it? This is extremely simple, to do this you have to meet two factors, one must be long and the other is short. And only 1%

of the population can meet these two criteria in order to be able to perform elbow licks.

#### **4. Squint one eyebrow**

To accomplish this action, you must be the person who can control all the muscles in your face well. According to scientists, this ability is inherited from our ancestors, and most people who have the ability to 'wave their ears' can frown easily.

#### **5. There are dimples**

The dimpled cheek is a prominent feature for many people in modern life today. Dimples cheeks easily noticed when we laugh. This dimple has been attached to the facial bone, so when smiling, a part or both of the cheeks will be hidden inside, creating a charm for the owner of the dimple.

## **6. Hole in ear ring**

According to calculations only about 5% of the world population possesses this characteristic on the body. Currently, scientists still cannot explain this strange feature on our human ears. However, many people speculate that small holes in the ear are due to inheritance from evolution from our ancestors while living in water.

## **7. Reverse thumb (Hitchhiker's thumb)**

Can you bend the thumb like in the image above. Definitely not, because in the world only 25% of people have this bizarre ability, and if you want to do that, you have to carry a very special gene that is 'bendy thumb'.

## 8. Wrist is not ribbed

Try to raise your hand and brace your arms and watch if your wrists have veins floating up? If you have a tendon, you are completely like 86% of the world population. Without a tendon, you are classified as 14% of those with special abilities.

For those without this muscle group, there is no need to worry, because experts say that this muscle deficiency will not cause any effect on the movement of the arm.

## 9. 'Darwin ears' property (Darwin's tubercle)

The characteristic of these ears is that there is usually a small part of cartilage protruding outward or the rim of the ear. This is a very normal thing, because these people often evolve, still have the same characteristics as our ancestors before the ears.

In the world only 10% of the population possesses these special ears, who often have good musical sensibility, as well as the ability to perceive sounds at high frequencies and recognize sounds. Clear motion in noisy environments than ordinary people.
