

95% of ATMs are still using Windows XP

95% of these ATMs will be made if Microsoft ends all activities supporting Windows XP since July 2015 as announced recently.

95% of these ATMs will be made if Microsoft ends all activities supporting Windows XP since July 2015 as announced recently.

After a while lulling down names like **Windows 8** and **Windows 8.1** , Windows XP has been mentioned more recently. Considering the Windows series so far, Windows XP is one of the most successful platforms of Microsoft. Although *Windows Vista*, *Windows 7*, *Windows 8* and *Windows 8.1* have been launched , all still can't " *crush* " the existence of Windows XP.

Microsoft has not been able to give up Windows XP.

Just a few days ago, Microsoft announced it would continue to provide patches for Windows XP until July 2015 because it was a platform with too many users, as well as it had many dangerous vulnerabilities that it had. This can't be ignored.

However, the *Bloomberg* news site has just added a more problematic issue to Microsoft as well as many of its partners that are ATM systems using Windows XP.

95% of ATMs are using Windows XP.

Specifically, there are currently 95% of ATMs still running old Windows, even systems that have been operating for 20 years and seemingly unable to upgrade to newer platforms such as **Windows 7** and above. . In this situation, technology experts have thought of two ways of handling. For systems that can be upgraded, the technician team must re-install it at each ATM station, but with the systems that are obsolete, there is only way . to discard or sell cheaply for purposes other.
