

# A Chinese company competes to introduce products to Samsung

Samsung has just released a video clip for the Galaxy Tab tablet, a Chinese news site reported that it also has 'on hand' the computer model.

**Samsung has just released a video clip for the Galaxy Tab tablet, a Chinese news site reported that it also has "on hand" the computer model.**

In the videoclip given by Samsung, the Galaxy Tab tablet has a 7-inch AMOLED screen and fully owns the previously anticipated features such as video call, Swype, the function of playing standard HD video clips, Flash support, Digital compass and e-book reading.

Samsung promises to launch this Android 2.2 tablet in Berlin on September 2.

Almost at the same time as Samsung released a Galaxy Tab video clip, Ifanr.com from China also published photos of a GT-P1000-coded Galaxy Tab. According to Ifanr's version, Samsung's Galaxy Tab has a 7-inch screen (1024 x 600 pixel resolution), 3.2 megapixel camera, GPS global positioning, 3G and Wi-Fi network connectivity.

In addition, Samsung's Galaxy Tab model has a front-facing camera that supports Video call and a number of integrated ebook applications. However, it seems that the Galaxy Tab version of Ifanr is just a sample version

and when officially launched, the device will have some changes.

**Here are some photos of Galaxy Tab published by Ifanr:**
