

A few notes that help extend the life of the blender

If you want to extend the life of your family blender, don't miss this article. Some of the points noted below will definitely help you.

If you want to extend the life of your family blender, don't miss this article. Some of the points noted below will definitely help you.

For new blender bought about

1. **Read the manual carefully before use:** This is an extremely important step for electronic devices for the first time to be used. This not only helps protect the safety of users but also helps the machine more durable.
2. **Check cleanliness before use:** Make sure the machine parts, grinders and mortar that come in contact with food should be cleaned before grinding.
3. **When the device is not plugged in:** You should leave the control button to position 0 to avoid unexpected sudden operation.
4. **The temperature and volume of ground food:** Make sure that the temperature of the grinded material does not exceed 60 degrees and that the volume should not exceed the maximum limit.
5. **Installing the machine:** Tighten the joints between the camera body and the blender or mill before you can use it.

Note during operation

1. Check and give less food than the actual capacity of the mill.
2. For fresh foods such as fish, meat, shrimp . must remove the shell, bone and grind with a moderate amount, before grinding to drain to avoid firing out.
3. For fruits, add less water or milk to the mortar to increase the efficiency of the grinding process and extend the life of the cutter.
4. Absolutely not open the lid or use your hands to pick up or mix food when the machine is still operating.
5. Because the grinder motor is operated with high intensity for cutting, tearing, and mixing food, many companies recommend not to operate the machine for more than 30 seconds, the machine needs time off for a few minutes before using next.

Note after finishing grinding

After grinding, you should perform the following tasks sequentially:

1. Power off.
2. Wait for the machine to stop working completely.
3. Start removing blender components: Mortar, cutter, lid, filter tube . and start cleaning the machine.

Note:

1. When disassembling, pay attention to the blades and the cutting unit of the machine.
2. For some fruit or food, it is recommended to pour water into the soak for a while and clean immediately. If it is too long, it will be hard to clean up later.

How to clean the blender

1. Rinse dishwashing liquid into a soft rag and clean the bowl, lid and stirring rod. For stains in the slit difficult to insert, use chopsticks to push the washcloth to clean the stains.
2. Rinse the body of the mortar, strongly rinse the water to remove stubborn stains and plaque.
3. When the parts are clean, use a soft rag to wipe them over and over, then bring the parts up in a cool place so that the machine does not smell bad.

When cleaning the blender, use a wet cloth, soft brush or sponge to clean, do not use metal dishwashing pads and detergents.

For long-term use, after grinding, soak and wash knives and funnels with a soft brush. Do not use hot water to coat the mortar or leave the jar in the refrigerator.

Top blender receives many good feedback from customers

1. Panasonic MX-V310KRA blender - Reference price: VND 1,450,000
