

A few things to keep in mind when choosing to buy a laptop under VND 10 million

Things to note below will help you choose to buy a laptop for less than 10 million but still ensure the basic elements such as beautiful, cheap, durable.

Things to note below will help you choose to buy a laptop for less than 10 million but still ensure the basic elements such as beautiful, cheap, durable.

Screen border

Screen borders are an important factor (affecting the display area of the laptop), but many people often overlook when choosing to buy this device.

Thin screen border helps:

1. Expand the display space of the machine, providing a better entertainment and work experience.
2. Reducing laptop size but still ensuring the display area makes the process more convenient.

Ability to upgrade

Hardware configuration is one of the most important factors affecting the price of a laptop. With prices below 10 dong, you can usually choose to buy a laptop with a mid-range configuration, suitable for everyday computing operations.

But after a period of use, memory requirements may increase or need to use will need faster processing speed, so you should choose to buy a machine capable of upgrading with a free or empty slot of RAM SSD. This will help you avoid having to replace the laptop in a short time, just invest about 3-7 million more for RAM and SSD as the machine can continue to operate smoothly.

Login method

New laptops have integrated fingerprint login function, faster and more secure than the login form by entering a traditional password.

Weight machine

For those who often have to move, participate in social activities, especially girls, a laptop with high mobility (thin, light) is more suitable.

Currently, most popular models have been applied thin, light design with a weight of only 2 kgs.

Good battery life

Battery life is always an important issue when choosing to buy a laptop because no one wants to take it next to use it but have to aim to find a power outlet to plug in the charger.

To determine the battery life of a laptop, you should read the manufacturer's specifications and refer to additional information from other sources because the actual battery life will vary depending on the user's actual operation.

Warranty service

In addition to the performance and design of the machine, another factor you need to consider when buying a laptop is warranty service. Should buy genuine machines from reputable distributors to enjoy warranty when repairing or replacing components.

When purchasing a device, you need to consider the terms of warranty service including: warranty period, warranty item and warranty center address, comprehensive warranty mode (free of cost replacement parts, repair costs) and partial warranty (only for repair or replacement of components).
