In addition to the authorities' efforts to find out who (the gang) deliberately spread this dangerous virus recently on a Twitter account called Fantastic Hacker is a 22-year-old boy in England Quoc claimed to find a temporary way to deal with the WannaCry virus that forced them to return the stolen data without spending a cent. But, he said, this is only a temporary solution to stop the WannaCry virus, it can come back anytime to undermine our network. Now, most people who are using the network are in a state of fear like sitting on a fire and being alert because they are not sure if they are the next victim of this virus attack.

Specifically, Hacker Fantastic said, as usual users will have to transfer money to the people behind this incident, after receiving the money, they will send us a message containing the password to be able to open. be the files that you have locked before. As for Fantastic Hackers, he was able to somehow send the system to send a confirmation message to transfer the counterfeit money to them, then cause the system to automatically return him data while he still hasn't transferred money.

Currently, Fantastic Hacker has not publicly announced how to completely resolve the WannaCry virus to many people. But let us hope because this case is quite serious, affecting many countries and it is being held by many authorities and online communities around the world to join hands to prevent the development of This dangerous virus.
