

A quick sense of Google Stadia game handle: Amazingly handy, amazing

first

Google today officially launched its ambitious Stadia cloud gaming platform, showing a bold but equally adventurous vision of Mountain View giant in deciding to enter the gaming market. relating to the distribution and experience of games in real time via internet connection. Until now, we don't know much about how Stadia will operate in practice, how it will be used, whether it will act as a Netflix subscription service for fish users. multiply or use another type of business model, or the exact time this platform will officially go into operation later this year. However, information about a remarkable hardware product in the Stadia ecosystem has been published in great detail by Google, and even the first comments on practical experience have been recorded, which is the handle plays Google Stadia game. We will point out a few notable comments from experts about this product right away.

1. Google launched the Stadia platform, only need to connect to the Internet and Chrome browser is able to play a terrible game without a genuine machine

First, it must be affirmed that the design of this handle gives a sense of luxury and aesthetics are generally quite high. Overall, the Stadia controller has a design and texture that is quite similar to the Xbox One gamepad devices that have been released recently - namely the release version with improved design from the Xbox One S. - but there's Sony DualShock 4 style thumb layout.

The Google Stadia handle is equipped with a USB-C connector at the top, a 3.5 mm headphone jack at the bottom and dedicated buttons to activate voice control features supported by Google Assistant and video game recording. In addition, the image of the Google website handle shows that the device owns a Konami Code in the form of a barcode label at the bottom, below the headphone jack. You can enter this code into Stadia website to

display the 3D model of the product you own. However, it is not possible to confirm whether the commercial version of the product is equipped with this detail.

1. Google Stadia uses custom AMD chips, powering up to 10.7 teraflops

In the impressive demo introduced on stage. Google has demonstrated a feature that allows you to use the Assistant handle button to display instructions on YouTube to consult how to overcome obstacles or specific situations that occur at an exact time in the game. Besides, this handle is also used to quickly launch games that you can find on YouTube's live streaming platform, so you can instantly access the game one by one. Another streamer is playing and playing live on Youtube.

According to Phil Harrison, the former director of Sony, Xbox and currently a vice president of Google, the Google Stadia handle will be connected directly to Google's data centers rather than a screen or system. Play the game you are using, so you won't have to worry about syncing between multiple devices, for example when switching from playing games through TV screens to laptops, for example. In an interview with The Verge, Mr. Harrison said that users could pair the device with the Stadia network using a companion mobile app. You will first have to connect the handle to your local Wi-Fi network and then access the Google Stadia service.

1. From now on you can play PlayStation 4 games on your iPhone

Google has yet to disclose the official price for the product, or whether it comes with Stadia service packs (assuming there will be a subscription package). However, it seems that this handle has been, and will continue to be, very much taken care of by Google, a good sign for those concerned that the Google Stadia controller will be a lower quality, lower quality gamepad. with devices sold with Microsoft and Sony game consoles.

Another interesting news is that Google's Stadia service platform can also support non-ecosystem hardware devices. Thus, you can use the game handle of other manufacturers when using Stadia translation service, it is likely that you will not be able to use the Google Assistant-related integration features.
