

A super light version of Genshin Impact appeared with a capacity of just over 80MB

Worry about lack of storage will no longer be a problem that Genshin Impact gamers need to worry about in the future.

Despite being one of the most popular games in the world during the past 1 year, Genshin Impact still makes many gamers shy because it is too heavy. If you play Genshin Impact on your phone, this game will take up more than 10GB of memory and this number on PC will be 20GB.

To overcome this problem, miHoYo recently introduced a completely new cloud platform that can help players solve the problem of lack of space to play Genshin Impact on any device.

This cloud platform can now be downloaded from the Chinese Apple App Store by searching for the application name "Van - Nguyen Than" with a capacity of only 88.1 MB. And to experience, you will just need to do one more simple step that is to log in to your miHoYo Pass account.

Previously, miHoYo revealed the process of testing this platform in China in October 2021 on both iOS - Android platforms and finally, the complete version has now appeared in the Chinese market. . However, this is a paid platform and users will have to use an in-game currency called miHoYo Coins to buy hours of usage.

miHoYo also publishes the app's payment rules. Accordingly, the first time you log in, you will have 5 hours of free play. If you exceed these 5 hours then you will need to buy more time for about 2 RMB per hour. In addition, gamers can also spend 60 yuan to buy free playing cards within 30 days.
