

A 'universal' prompt for AI beginners.

Prompts, or commands, are essential for getting started with AI. These simple prompts will help you use AI immediately, right from your first use.

Prompts, or commands , are essential for getting started with AI. **These simple prompts will help you use AI immediately, right from your first use.**

Artificial intelligence (AI) is expanding its applications more and more. But that doesn't mean everyone is using AI or even knows where to start. AI is still very new to many people. The truth is, nobody tells them exactly what to say when they first interact with a chatbot.

Most users open the app, stare at the blinking cursor, and/or type something vague like "write me a poem." However, if you stop there, you'll find it difficult to fully utilize the potential of AI.

If you're new to AI, here's a secret: **You don't need a complex system, an expensive course, or a PDF file of 500 commands. You just need a solid starting point.**

A "universal" prompt for AI beginners.

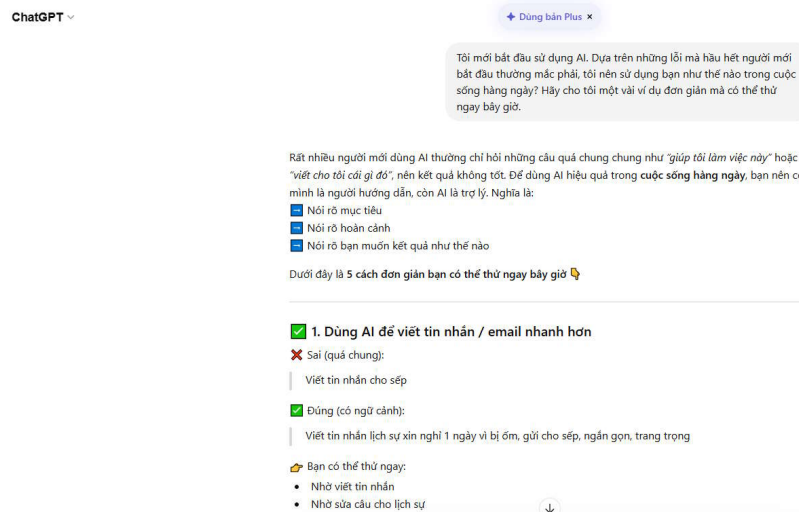

If you don't know where to start, copy and paste this exact sentence into ChatGPT , Claude, Gemini, or even Perplexity:

'I'm new to using AI. Based on what most beginners get wrong, how should I be using you in my daily life? Give me a few simple examples I can try right now.'

Or:

"I'm new to using AI. Based on the common mistakes most beginners make, how should I use you in everyday life? Please give me some simple examples that I can try right now."

It sounds simple, but this command does something most people completely overlook: **It asks the AI to guide you on how to use it, and at the same time, shows you the AI's capabilities — which can vary depending on the chatbot you're using.**

Why is this prompt useful for any AI?

Most beginners approach AI in one of three ways. They treat chatbots like Google and ask simple questions instead of conversing with the AI like a human. Or, they might ask random questions just to see what the AI knows. And sure, AI is great for learning new things, but when you're just starting out, you're probably wondering why you need to use it.

By starting with small suggestions, you'll discover what AI can do for you and eventually apply it to your daily life.

This command won't produce generic results that leave you wondering why it's so highly praised. It reverses the situation. Instead of guesswork, you're forcing the AI to point you to specific, real-world use cases tailored to you. It transforms AI from a search engine into a personal consultant.
