Known for producing 3D laptops since June, Acer has just released the first images and information about its 3D Aspire 5738DG laptop.

The Aspire 5738DG does not directly use 3D hardware devices such as Nvidia 3D Vision graphics cards, but instead Taiwanese computer makers rely more on Acer 3D CineReal software solution with a 3D overlay of laptop screens and Polarized glasses to bring users into the world of "real but bad" 3D images.
