Acer can produce 15 inch ultrabook with fiberglass shell in April 4-5 years. (Photo: *The Verge*).

According to *The Verge* , Acer is producing a new 15-inch ultrabook model since mid-March this year. A special feature of this product is that the shell is made of glass fiber, not aluminum as usual in ultrabook models. As expected, this product will be launched around May next.

A source of *DigiTimes* said, Pegatron is the main manufacturer for the above 15-inch ultrabook model. Orders from Acer are rumored to be up to 100,000 products shipped each month.

Currently, there is no information about the configuration or selling price of this product yet.
