Computer maker Acer recently launched a new version of Chromebook C7 with improved specifications compared to the original that appeared in October 2012 to meet consumer basic needs. .

**Computer maker Acer recently launched a new version of Chromebook C7 with improved specifications compared to the original that appeared in October 2012 to meet consumer basic needs. .**

The new version of the C710-2055 Chromebook C7 comes with faster hardware parameters and higher prices. The Intel Celeron 847 chip has a speed of 1.1 GHz and 4 GB RAM, a 320 GB hard drive for storing different files along with the cloud storage space provided on current Chromebook versions.

According to Acer, this new version has a battery that lasts for 6 hours / charge, 2 hours more than the previous version.

In addition to Acer, the purpose of the new Chromebook C7 is also a good choice for anyone who needs a computer to meet their daily needs.

The new version of the Chromebook C7 is not much different from the old model when it has an 11.6-inch screen and a weight of 1.36 kg, only changing specifications.

The selling price of Chromebook C710-2055 is 279 USD, 80 USD higher than the original version.
