

# Acer launched the Predator Triton 500 with the first new CPU and RTX SUPER card in Vietnam

Acer Vietnam officially introduces the latest upgrade of the Predator Triton 500 gaming laptop in its Predator product line. Triton 500 is a popular gaming laptop with an aluminum unibody design, ultra-thin, ultra-light, using the latest processors and graphics cards from Intel and NVIDIA first in Vietnam, as well as the system.

## Predator bold design for all gamers

Predator Triton 500 has an "eye-catching" design for all gamers. Featuring sharp and delicate lines, the Predator logo features an Electric Blue glowing LED light on the solid aluminum cover of Triton 500 which is an impressive highlight. Compared to the previous generation, the logo of the device has been minimalist but somewhat cooler, as if challenging every opponent in front of it. The weight of only 2.1kg and the thickness of only 17.9mm make the gaming laptop with the most modern power now more compact than ever, but still ensure the quality of the pit of Predator standards.

The keyboard with the WASD clusters and navigation key clusters is highlighted, turning colors in harmony with the change of each RGB backlight key. The screen of the Triton 500 has a thin bezel of only 6.3 mm, which helps the device to achieve a screen-to-body ratio. The angular pentagonal screen circle combined with the ultra-thin screen border and the ability to open the screen 180 degrees make the laptop's design a unique gaming design unmistakable.

### **The ultimate heat sink for intense battles**

Advanced cooling architecture helps keep Predator Triton 500 running smoothly and cool during gaming and heavy tasks. The machine is equipped with up to 3 cooling fans, including a new 4th generation AeroBlade 3D cooling fan with over 45% cooling performance. This fan is made up of 59 steel blades, only 0.1mm thin, with a serrated groove on each steel leaf that helps reduce noise when operating at high intensity. The aerodynamic design has been improved on the new Triton 500, which increases the vortex airflow into the body, making the system reduce 16% of heat and 7% of noise compared to the old version.

The conveniently designed Turbo button located right above the keyboard allows for hardware overclocking, increasing fan speed instantly, keeping system temperatures stable and "keeping heat" for stressful matches. .

### **Leading performance with new processors and graphics cards**

Predator Triton 500 is the first gaming laptop in Vietnam to be equipped with the 10th generation Intel Core i processor and the latest graphics card from NVIDIA. Accordingly, the highest configuration of the new Triton 500 has NVIDIA GeForce RTX 2080 SUPER graphics card with Max-Q design, 10th-generation Intel Core i7 processor - 10850H, 1TB SSD NVMe PCIe RAID 0, and 16GB RAM can be upgraded to 32GB DDR4. This graphics card is equipped with NVIDIA Turing architecture with more cores, higher clock speed and faster memory to deliver top-notch performance and ensure the authenticity of images at an incredible level.

The 15.6-inch Full HD display with IPS panel combined with super-fast 300Hz refresh rate and 3ms response rate for a perfect gaming experience. NVIDIA G-SYNC technology (built-in with NVIDIA GeForce RTX graphics cards SUPER version) helps gamers fight smoothly in the justice arena.

The price of the new Predator Triton 500 is from VND 54.99 to VND 79.99 million. The machine will enjoy Acer's 3S1 Warranty: fast warranty, within 3 days including Saturday and Sunday, after 3 days does not finish repairing a new device for users.
