According to *Electronista* , Acer began releasing the Aspire V3 model using the latest generation Intel Core processor in Japan on April 29. This product was exhibited by the Taiwanese manufacturer at the CeBIT event in Hannover (Germany) in March this year.

Aspire V3 uses a 2.1GHz Core i7 processor based on the Ivy Bridge platform. The device is equipped with 8GB of RAM and 750GB hard drive. The Aspire V3 15.6-inch screen has a resolution of 1,366 x 768 pixels, integrated 1.3 Megapixel webcam for video conversation.

The included battery makes Acer Aspire V3 work continuously for 4.5 hours. In addition, Acer's new product is also equipped with Bluetooth 4.0 and Dolby Home Theater v4 audio technology. It runs Windows 7 Home Premium operating system.

As expected, the Aspire V3-571-H87F will be sold in Japan for \$ 1,111.
