

Activate to open the settings page (Share page) hidden on the Windows 10 Settings application

On Windows 10 with integrated features Share page. However for some reason this feature is hidden in the Settings app. If you want to customize flyout when you click on the Share button on Microsoft Edge, Windows Store application or File Explorer, you can enable the Hide page feature on the Windows Settings application. To do this, please refer to the following article of Network Administrator.

On Windows 10 with integrated features **Share page** . However for some reason this feature is hidden in the Settings app. If you want to customize flyout when you click on the **Share** button **on Microsoft Edge** , Windows Store application or File Explorer, you can enable the Hide page feature on the Windows Settings application. To do this, please refer to the following article of Network Administrator.

Activate to open the settings page (Share page) hidden on the Settings app

Note:

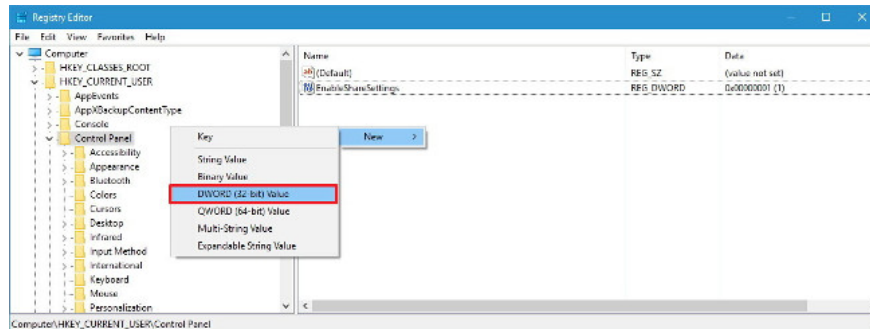

Editing the Registry can be dangerous and cause serious problems. So before taking the steps you should proceed to back up the system before proceeding.

1. First press the **Windows + R** key combination to open the **Run** command window.
2. On the Run command window, enter **regedit** and press Enter or click **OK** to open the **Registry Editor** window.

3. In the Registry Editor window, navigate to the key:

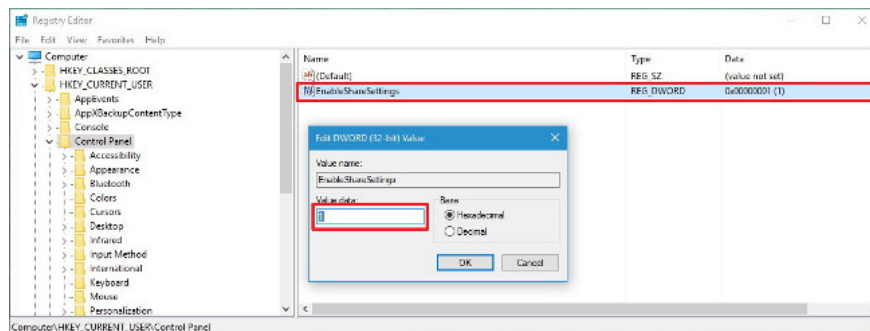

HKEY_CURRENT_USER\Control Panel

4. In the Control Panel key, right-click on the right pane, then select **New => DWORD (32-bit) Value**.

5. Name the new DWORD **EnableShareSettings** and press Enter.

6. Double-click the new DWORD to create and change the value in the Value Data frame from **0 to 1**.

7. Click **OK**.

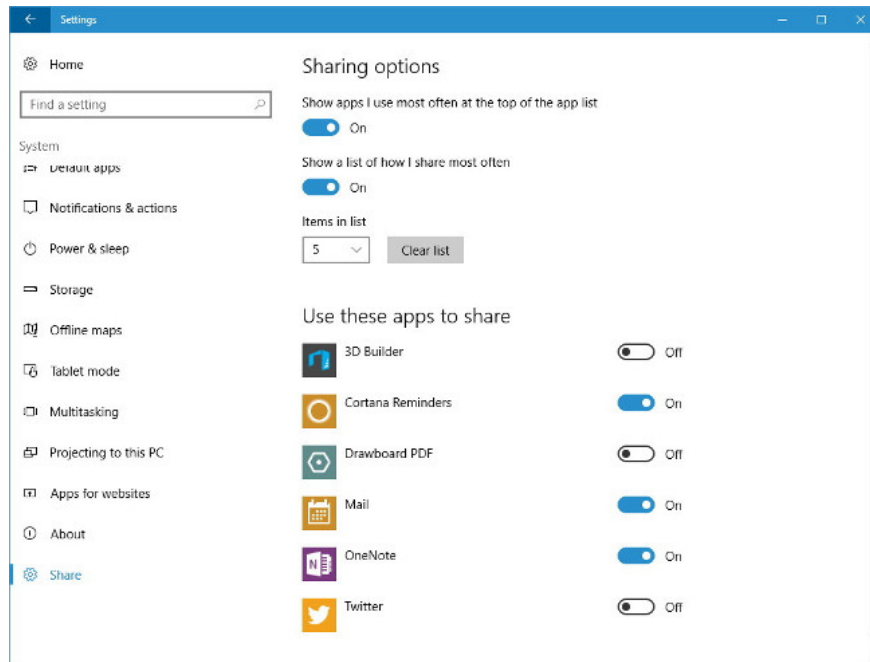

8. Close the **Registry Editor** window.

9. Restart your computer to complete the process.

After completing the above steps, open the Settings app and you will see the new **Share page** option appear.

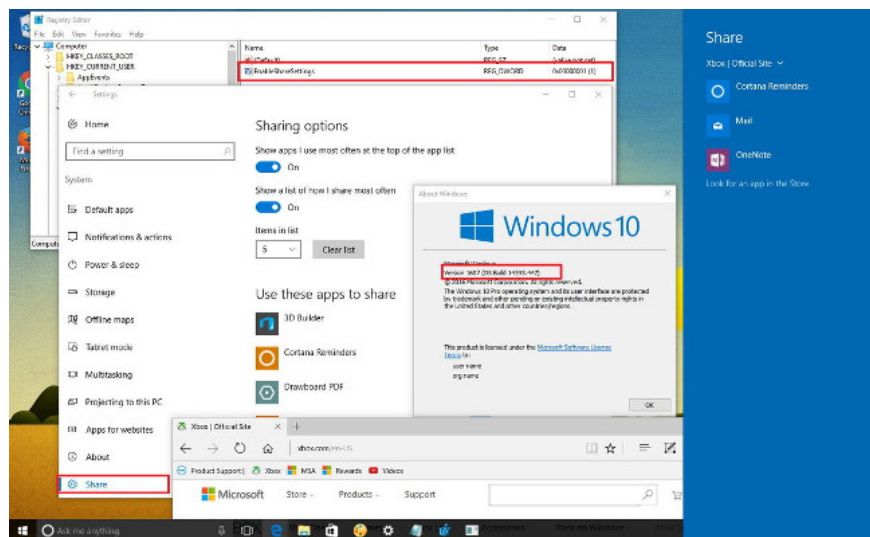

To change sharing options, follow the steps below:

1. Open the **Settings** application.
2. On the Settings window, find and click **System**.
3. Click to select **Share**.

In the Share page you will see and can control which applications are allowed to share, the number of items that appear on the flyout and which applications are frequently used on the list.

To see these new changes, you can use any Windows Store, Microsoft Edge or File Explorer applications, then click the **Share** button.

In case if you want to change back to the original setting, follow the same steps and change the value in the Value data frame from **1** to **0**.
