

Adblock and Adblock Plus: What are the differences? Which extension should you use?

Understanding the similarities and differences between Adblock and Adblock Plus, and deciding which ad blocker is most effective and suitable for your browser, isn't a simple task. However, TipsMake will compare and guide you on which Adblock and Adblock Plus to use to best suit each browser on your computer.

Few people know that Adblock and Adblock Plus are vastly different, not only in name but also in their usage and the advantages and disadvantages of each browser ad-blocking tool.

Most users typically install Adblock on Google Chrome or Firefox, but this doesn't accurately reflect the advantages and disadvantages of Adblock when applied to each browser. In other words, installing Adblock will yield different ad-blocking effects.

Distinguishing between Adblock and Adblock Plus: Features, Advantages, and Disadvantages

Adblock Plus

Adblock Plus was the first ad-blocking extension for Firefox, and later for many other desktop browsers. However, on Google Chrome, Adblock Plus caused lag when playing games, leading users to prefer Adblock.

* Features

Adblock Plus boasts a large user community, particularly among those who dislike distracting ads on websites. Adblock Plus uses open-source code and has an easy-to-navigate interface, offering numerous options, ad filters, and skip lists for user convenience.

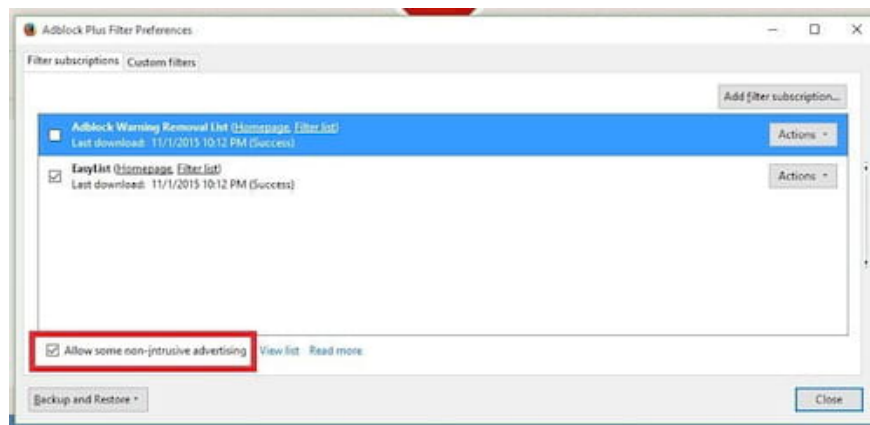

* Advantage

- The large user community and open-source code facilitate the development of many new features.

The installation process was quite quick and easy.

- Easy-to-use navigation interface and functions

* Disadvantages

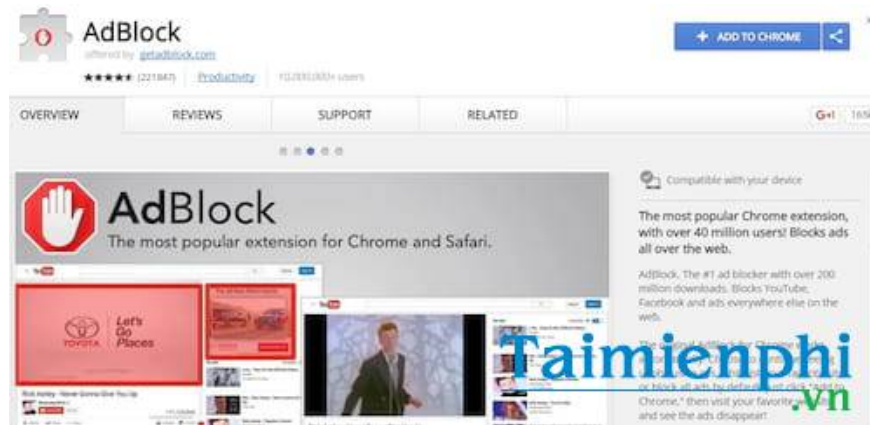

- This forces users to choose whether or not certain ads are allowed to remain through a whitelist.

- It doesn't completely block ads from appearing on a website.

Adblock

Adblock is an extension that emerged after the Adblock Plus project and was created specifically for Google Chrome by an independent developer named Michael Gundlach. Although initially only available for Google Chrome, Adblock is now available on various other browsers.

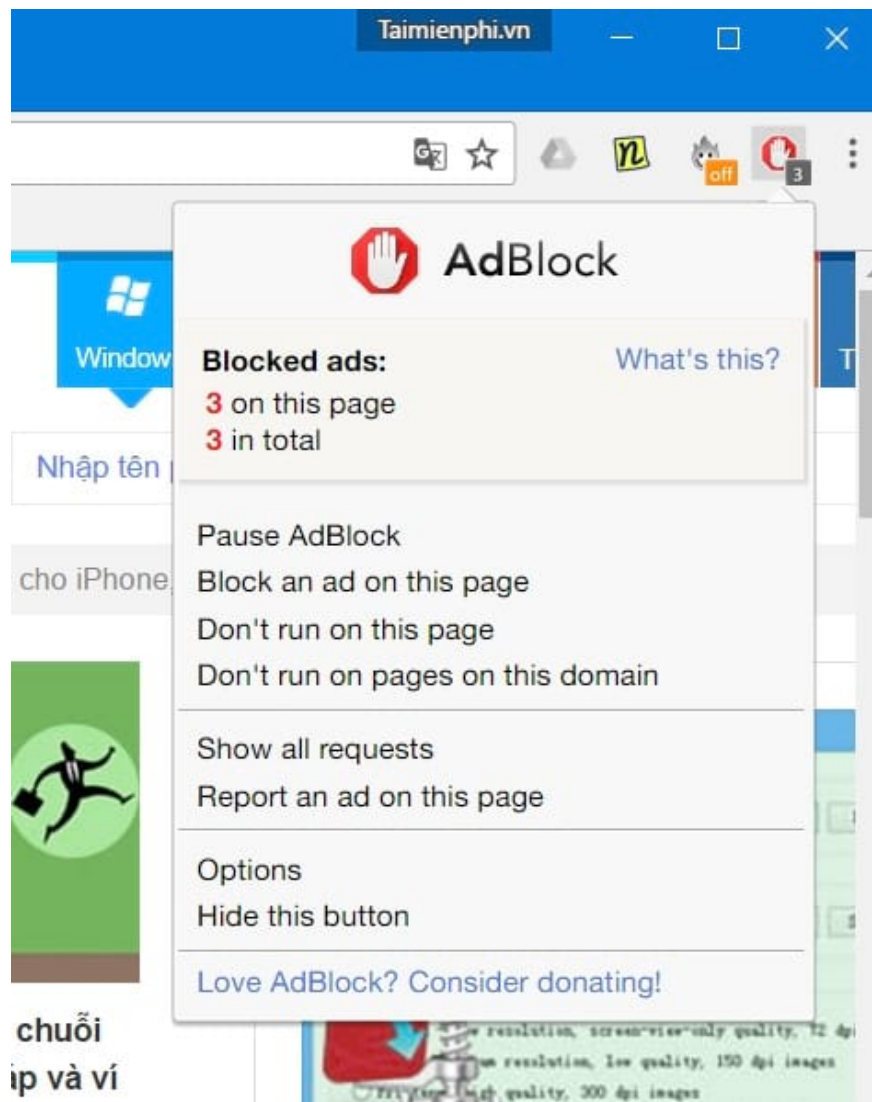

* Features

Adblock offers almost all the same features as Adblock Plus, including ad-blocking filters and customizable interfaces for Google Chrome, Firefox, and IE. However, this extension works best for blocking ads in Chrome, rather than Firefox or other browsers.

* Advantage

- Open source, easy-to-customize and navigate interface.
- The installation process is quick and easy across browsers.
- Uses an ad filtering system similar to Adblock Plus.

* Disadvantages

- Opening many tabs can slow down your browser, especially when blocking ads on Google Chrome on a computer.
- The ad removal feature on YouTube may sometimes not work properly, and ads may still be visible.

Conclude:

Both Adblock and Adblock Plus ad-blocking tools have their own easily recognizable advantages and disadvantages. In particular, comparing Adblock and Adblock Plus based on browser compatibility can help users determine which ad-blocking tool is most effective.

Self-serving online advertising can benefit all users; however, many exploit it by placing malicious and dangerous links. Therefore, using Adblock and Adblock Plus is essential. First and foremost, however, every user should correctly distinguish between Adblock and Adblock Plus.

For users of Android phones or iPhones and iPads, there are also ways to block ads on Android by using browsers that support ad blocking on Android, such as Adblock Plus, Orfox: Tor Browser for Android, etc.
