Usually every photo only records a brief moment. However, with exposure techniques, you can do what a normal photographer can't do is **record the time**, which means that when you look at the exposure image you'll see the movement of the time. space in it. The goal is to allow more light to enter for long periods of time to create a lasting light effect for artistic images.

Long exposure or **slightly light** is a popular technique among photographers, used to capture landscape photos such as waterfalls, skies, streets . During the shooting, **the photographer will Adjust the shooting time so that it takes longer to take a normal photo to make the camera's exposure to light longer, creating unique and fancy effects.**

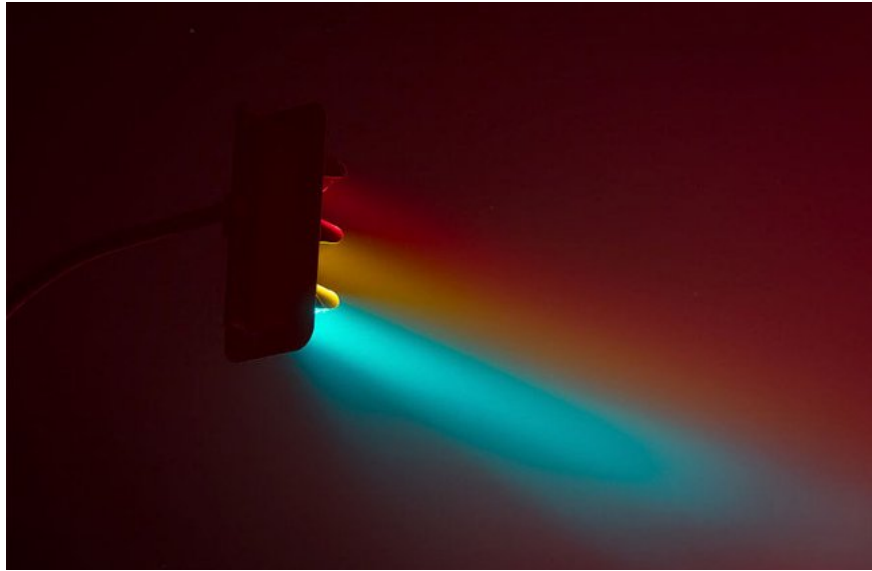

With long exposure techniques, photographers can capture vivid, artistic photographs that cannot be taken when taking ordinary photos. Flexible application of this technique together with the creation of photographers will create spectacular and beautiful moments.
