

Admire the beautiful super moon image in the sky of Vietnam and the world

Let's review a round to admire the image of interesting astronomical phenomena, Super Moon takes place around the Earth last night, 3/12.

The first and only Super Moon of 2017 took place last night, December 3. This time, Earth's natural satellite approached 26,500km more than the normal distance, so we can observe that Super Moon last night is 7% bigger and 16% brighter than normal.

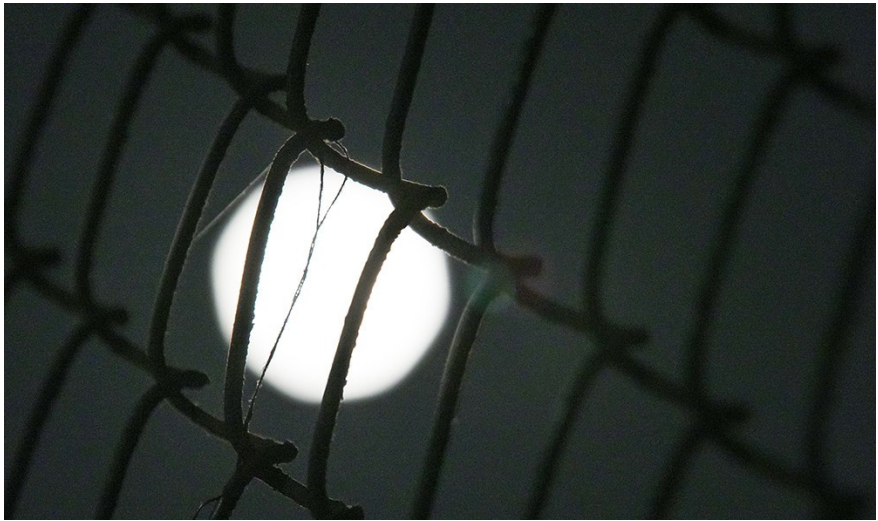

1. Why does the Moon look bigger and closer when it is at the horizon?
2. Unexpected discoveries of the full moon
3. 20 pictures of super beautiful splendor around the world on November 14

In fact, in 2017 there were 3 Super Moon but all coincided with the "new moon" period so this would be the first and only super moon that could be observed.

Let's review a round to admire the image of interesting astronomical phenomenon, super moon takes place around the Earth.
