

## **AeroFit 2 Pro: Anker's new earbuds address one of the most annoying problems.**

Anker brought a huge array of new technologies to CES 2026, including a full range of headphones, speakers, chargers, and more. Among them, there are two specific tech products you should pay attention to: the new AeroFit 2 Pro headphones and the company's super cute new Nano charger.

Anker brought a huge array of new technologies to CES 2026, including a full range of headphones, speakers, chargers, and much more.

Among them, there are two specific tech products you should pay attention to: the new AeroFit 2 Pro headphones and the company's new super cute Nano charger.

### **Anker's new Soundcore AeroFit 2 Pro headphones address the shortcomings of their predecessor.**

**It's great that tech companies listen to feedback.**

The author of this review tested the AeroFit 2 headphones in February 2025, although they were released a while before the review date. However, the review date didn't change the overall impression of these open-ear headphones: they are generally good, but difficult to position and the controls are prone to accidental touches.

Soundcore has addressed a major concern with its new design and added some new features you won't find on other open-back headphones, namely active noise cancellation.

This feature is quite surprising to find on open-back headphones, because the whole idea behind this type of headphone is to keep you connected to the outside world. But Soundcore has turned one of the biggest drawbacks of open-back headphones into a unique and surprising feature.

Even better, it actually works effectively. It's a little tricky to get them in place, but to be fair, this is a problem we encounter with most open-back headphones. However, once properly positioned, the noise cancellation (ANC) is better than expected. The AeroFit 2 Pro headphones have 5 adjustable positions to help you find the optimal fit, one more than the original version. That level of customization makes it easy to find a comfortable position for the seal that ANC technology requires.

In this regard, Soundcore claims their new headphones will fit over 90% of users, which is clearly an impressive number. It's surprising to see them fit so comfortably without much effort, so that's entirely possible.

Additionally, the Soundcore AeroFit 2 Pro headphones feature 11.8mm composite drivers, Hi-Res audio via the LDAC codec, flexible head tracking, and AI-powered calling technology that ensures your voice is always clear and crisp.

The Soundcore AeroFit 2 Pro headphones are currently being sold for \$180/£180.

**Anker's new 45W Nano charger is fantastic.**

**It's compact and super cute.**

Of course, Anker's flagship product is its chargers, and the new 45W Nano charger is a great addition to the company's product line.

This compact, pocket-sized charger has a small screen that displays the charging status and a fun cartoon character that indicates the charge level, which is a nice touch. It's not the first charger with a screen and cartoon character to show the charging status, but it turns out people really like things like this.

The Anker 45W Nano Charger's ability to automatically detect the iPhone model and adjust the charging power accordingly is also noteworthy.

This is a fresh redesign of the classic Nano Charger, a charger many people carry almost everywhere. The new 45W Nano Charger will be available at the end of January 2026 and will cost \$40.

## **Anker always brings great products to CES.**

Those are just two of Anker's best new products at CES 2026, but the company has much more to offer at this tech show.

The new eufy Clean Omni 2 robot vacuum, with its significantly upgraded mopping system, and the new eufy Security Doorbell S4, which uses OmniTrack technology for more accurate detection than before, are also noteworthy.

Stay tuned in the coming weeks and months as all of Anker's new hardware begins to go on sale!
