

# After Intel, Microsoft blocked April 2018 Update on some Toshiba SSDs

Some Toshiba SSDs cause an incompatible error when updating Windows 10 April Update

Microsoft Update Windows 10 April 2018 has a lot of problems related to both hardware and software, one of which Microsoft discovered was a failure of UEFI on Intel SSDs. Now following Intel, Toshiba SSD also falls into the same situation.

Currently, Microsoft has blocked April 2018 Update on Toshiba SSDs, including XG4, XG5 and BG3. Microsoft is also working with Toshiba to find out the causes and remedies.

*'Microsoft is working with OEM and Toshiba partners to find and block devices that use XG5 and BG3 SSDs to install updates April 2018 Update because an incompatibility error can cause battery problems'.*
