At that time, we often thought that the air conditioner was damaged and went to a repairman. However, before doing this, please refer to the tips below to know how to handle when the air conditioner is not working.

Used for a long time, even if the air conditioner of any company, there will be trouble at times, for example, the phenomenon of air conditioner has a strange smell, there is a sound inside, not receiving remote or air conditioning does not work , . At that time, we often thought that the air conditioner was damaged and went to a repairman. However, before doing this, please refer to the tips below to know how to handle when the air conditioner is not working.

1. Harmless effects are not expected when regular air conditioning is not maintained
2. Do air conditioners need to change copper pipes?
3. What is the error of the air conditioner flashing continuously?

Strange smell

Air conditioner has the ability to absorb carpets and furniture in the room and then let them out into the air, so if you notice a strange smell, you don't need to worry too much. You should regularly clean the air conditioner room very clean to remove unpleasant odors in your living and working space.

The crackling or the rustling inside

The reason you see this phenomenon is because of the elasticity of the case and other details when the temperature changes. Nor does it exclude the possibility of a rustling sound due to the movement of refrigerant inside the machine.

There is a fog coming out of the outdoor unit

The difference in temperature between the room and the outside when regulating the operation is the cause of the dew phenomenon.

Even if the device is turned off, it is impossible to stop the outdoor unit

Normally, when the operation is stopped, the outdoor unit will not turn off immediately but continue to turn the fan to cool the machine, then turn it off completely.

The machine does not receive remote control

If you cannot control the air conditioner due to a remote malfunction, please check the battery to see if it is still usable, try to press the remote again and direct it to the machine, check the way of installing the remote battery, . If not, please refer to 3 common errors on the remote air conditioner and how to fix it accordingly.

Air conditioner does not work

Please check if your home has electricity or not, don't forget to consider situations such as a knife-pull down.

Air conditioning is not cold or poorly cooled

Air conditioner is running normally but suddenly it is not cold or cold, then you need to check the dust filter plate, if dirty, remove and clean. Be sure there are no obstructions to the air entrance / exit. Besides, you can review the setting temperature, whether the doors and windows are closed or not, .

These are some of the causes and ways of handling when the air conditioner is not working, if you still have not resolved the problem the air conditioner you are experiencing, then contact the service center for air conditioning. running out of gas or worse is experiencing a serious failure.

Hope you are succesful.
