

AirBattery, the free Android app that helps check the remaining battery on AirPods

AirBattery will help you see battery life information on AirPods working with Android phones.

AirBattery will help you see battery life information on AirPods working with Android phones.

AirPods, Apple's wireless headset can work with any smartphone on the market. But when connecting to Android device, it will not display battery status information like on iOS device.

The free AirBattery application will help display the detailed battery level of AirPods headsets and their charging cases when working with Android phones.

Currently, AirBattery works with AirPods and BeatsX headsets. In the future, updated versions of this app will support other Apple headsets including Beats Studio 3 Wireless, Beats Solo 3 Wireless and Powerbeats 3.

Note: AirBattery is a third-party software that only displays time at 100% (full battery), 95%, 85%, 75% .
