## What are air mattresses, steam seats? Good use?

### Structural characteristics

Air mattresses (or air mattresses), steam chairs are products used to serve the needs of sleeping and relaxing for users. Their structure usually consists of 2 parts:

1. **Outer shell** : Made from PVC mesh fabric mixed with Polyester fibers with characteristics that are waterproof, air permeable.
2. **Inner layer** : Made from super porous or rubber sponge, it acts as a cushion to stretch when pumping and creating smoothness for the cushion.

Comes with air mattresses, steam chairs are supporting accessories such as airbed pumps, steam seat patches, .

### Outstanding benefits

Air cushion is really a great solution for modern life. They give users many benefits such as:

**Optimizing usage space** : The steam pad is really versatile in use. When not in use, simply blow off the steam inside the mattress, fold it neatly and store it in the closet. Families with small areas should use this product to optimize space.

**Good for health** : Airbags, air tubes inside the air mattress, chairs are like a massage system, giving users a feeling of comfort, relaxation, relieving neck pain, spine, lumbar and good for osteoarthritis patients.

**Convenience** : In addition to using at home, you can bring air mattress to travel, picnic, bring to the office for lunch break or use when guests come to play, .

Steam seats, air mattresses bring many benefits to users

## **Types of steam seats, air mattresses are popular today**

It is possible to divide the types of steam seats, air mattresses into two types: Airbeds (also called air mattresses) and steam seats.

**Airbed (air cushion)** : Designed like a small bed, used to sleep.

Airbed

**Backrest chair** : Usually has the same shape as a sofa, allowing users to lean back and relax, read books, watch movies, .

Steam chair

Airbeds and inflatable seats are generally different in style, but the material, construction and operation are not different. Choosing a chair or air mattress depends entirely on the needs of the user.

## **Instructions on how to pump steam seats, air mattresses**

How to pump air cushion seats, air mattresses is really simple. It only takes 5 minutes for you to complete this. Pumping steps include:

**Step 1** : Find the suction head, exhaust head of the pump

**Step 2** : Use the exhaust end of the pump to the air valve of the cushion and pre-pump

**Step 3** : Remove the far end of the pump when the cushion is tight

**Step 4** : Hold air valve and use air cushion.

**Step 5** : When there is no need to use, you need to open the exhaust valve and wait until the cushion is completely flat, fold and then take away.

## **Notes when using steam seats, self-inflating airbeds**

When using a steam chair, user air mattresses should pay attention to some of the following:

1. Do not inflate too much because in the long run it will reduce the vapor density of the air mattress
2. Do not place air cushions next to sharp objects such as knives, scissors, metal wires to prevent them from puncturing them.
3. Do not place air chairs, air mattresses next to heat sources such as ovens, stoves, heating lamps, etc. High temperatures will reduce the durability of the mattress.
4. Do not jump continuously on the air cushion
5. Only use at permissible load

Using airbeds, chairs are slightly correct
