

Alienware launches a wireless mouse and keyboard designed specifically for professional gamers

Within the framework of the annual CES 2024 event, Alienware has just launched a series of peripherals that meet a variety of gaming styles.

Within the framework of the annual CES 2024 event, Alienware has just launched a series of peripherals that meet a variety of gaming styles, including wireless keyboards and mice designed specifically for professional gamers. Karma.

Called Alienware Pro Wireless Mouse and Alienware Pro Wireless Keyboard, the special feature of this wireless mouse and keyboard model is that it was developed with the participation of more than 100 professional eSports gamers, including members of the famous gaming team Team Liquid.

Uniqueness in appearance is also a factor that needs to be mentioned in new products. For example, the Wireless Mouse Pro's rounded, symmetrical shape is specifically designed to be comfortable for most people to hold. This is also a very light mouse model with a weight of less than 60g. It all adds up to excellent ergonomics.

Interface:	USB, 2.4GHz
Ergonomics:	Right-handed
Buttons:	6
DPI:	26,000
Switches:	Optical
Weight:	2.12oz / 60g

The mouse has a 26,000 dpi optical sensor. Polling rate can be up to 4KHz with 0.25ms response time in wireless mode, and 8KHz with 0.125ms response time via USB cable connection. Notably, Alienware also equips this mouse model with a special technology called "Magnetic-Force Keyplates with optical switches", which helps bring a more interesting feeling to the keys, improving quick clicking speed at the same time. Prevents knot sticking.

The mouse's battery life will last up to 120 hours at a polling rate of 1KHz, or up to 32 hours when operating at a higher polling rate of 4Khz.

About Alienware Pro Wireless Keyboard, Alienware's new wireless keyboard model has a 75% smaller design. Inside, the keys use the company's exclusive Alienware Linear Mechanical Switches technology, which will have an actuation force of 40g for quick response time. However, the keyboard will also support most 5-pin and 3-pin switches. The keys also have two layers of silicon sound damping, providing a higher quality typing experience
