Alienware is a famous brand without controversy for authentic gamers. But accompanying the graphics power inside, the company's products are often quite large and bulky. This is one of the obstacles that many people mentioned when Alienware started to set foot in Asia last year, two years after being bought by Dell.

However, after only a few months, Alienware began to take the right steps to conquer this difficult market. Evidence is that the company recently launched a compact gaming laptop called **M11X** . Not much information has been revealed about the detailed configuration of this machine, but according to Pcworld, M11X will have an 11.6-inch screen with a resolution of 1,355 x 768 pixels and weighs 1.8 kg.

In addition, the device is also equipped with Intel's Core 2 Duo processor and GeForce 335M graphics card with battery life of about 2 hours while playing games. In the basic operation mode, the machine switches back to using onboard graphics card to save energy, which helps the battery life up to 6 hours.

According to announcements from Dell, M11X can play Call of Duty: Modern Warfare at the highest graphics setting at 30 frames per second. The score that the machine achieved when testing with the program is 3DMark is from 6,000-7,000 (however, the manufacturer did not disclose the version of 3DMark used and set up of the

machine at that time).

With the ability to play the game is quite good but according to Pcworld, M11X is priced at less than 1,000 USD.
