If you want to update Nvidia GTX680M graphics card for Alienware M17x and M18x, users have to pay 550 USD. (Photo: Techradar).

Shortly after Nvidia introduced GeForce GTX680M graphics card at Computex (Taiwan) earlier this month, Dell quickly updated its gaming laptop line with GPU models based on its latest Kepler platform.

With a starting price of US \$ 1,499, users will own the Alienware M17x with Core i7-3610QM chip, 6GB RAM, 500GB HDD and GTX660M graphics card with 2GB VRAM. If you want to upgrade to 2GB GTX680M, customers have to pay an additional 550 USD. In addition, Dell also allows users to upgrade to Core i7-3820 processor, 512GB SSD, 32GB RAM and 3D screen resolution of 1,920 x 1,080 pixels.

Meanwhile, for the M18x model, users will have to pay a starting amount of \$ 1,999. Customers can choose to upgrade the machine with a GTX680M card or a pair of GTX680M SLI for \$ 550 and \$ 1,100, respectively. Dell also allows users to upgrade other hardware such as Core i7-3920XM processor, three SSDs, 32GB RAM.

Currently, users can order online right on Dell's online store. Delivery date will start from July 3 next.
