

All information about Apple's upcoming iPhone 3, iPad, and Mac 3: focus on the camera, edit videos right on the phone, copy Samsung reverse charging

Too many new products and worth waiting for 'Apple'!

Apple will launch a series of products to look forward to next week and the following months, including the "Pro" iPhone, iPad Pro new generation and also the Mac. In addition, users can also wait for the next generation of accessories such as the Apple Watch, HomePod, new AirPods, along with software upgrades for the entire current product.

Today, we are going to gather all the rumors to get a complete overview of what we can expect of both of these products.

Iphone

iPhone XS Max / Photographer David Paul Morris

- The company is expected to launch 3 iPhones, the tactic that has been used from 2017 to now, will be upgraded versions of the current iPhone XS, XS Max and XR.
- The central feature of the new iPhone Pro series will be a fully upgraded shooting system, including super wide-angle camera. The new camera will allow users to zoom in and out, shooting wider scenes. It will also be able to take 3 photos in 1 press, then use AI to correct the view if necessary. Both the resolution and the ability to shoot in the dark will be significantly improved.
- The most advanced product lines will be able to record video not inferior to professional models, along with the ability to edit (color, cut, .) right on the machine to be able to share always without a computer.

- Like the Samsung Galaxy S10 and Note10 series, the new iPhone will also be able to share energy via the Qi standard for other smartphones or accessories.
- The new iPhone lines will have a design very similar to the current iPhone XS and XS Max, but will have a new color, along with a matte back to minimize fingerprints. The company is also said to be developing a new type of glass that is stronger and harder to break when dropped.
- Face ID system will have a wide-angle sensor, thereby helping users to open the machine without placing the machine parallel to the face.
- The water resistance of these machines will be very impressive, can be submerged for 30 minutes longer than the current generation. 3D Touch will be removed entirely, instead it will equip Haptic Touch vibration sensor for full screen.
- The successor to the iPhone XR will have a far-zoom camera, enhancing the ability to capture objects . in the distance and the ability to take portraits. There will also be a green version.
- All 3 machines will be equipped with A13 chips, with a component called 'AMX' to handle the heavy work next to the main processor. This component will also help Apple better develop augmented reality (AR) applications in the future.
- iPhone 2019 will not have 5G, this feature will be reserved for next year.

iPad

- After launching the new iPad Air and iPad Mini, Apple is planning to upgrade the iPad Pro and low-cost iPad for students.
- 11-inch and 12.9-inch iPad Pro will also have upgrades like the iPhone 2019, including a powerful camera system and a new processor, while the exterior design will be preserved.
- Cheap iPad line will be increased in screen size, from 9.7 inches to 10.2 inches.

Mac

MacBook Pro / Photo: David Paul Morris

- The new MacBook Pro line will have a 16-inch screen option, but the screen bezel is significantly thinner so it will have the same overall size as the current 15-inch line.
- This will be the MacBook with the largest screen, since the company stopped selling the 17-inch MacBook Pro in 2012. This is Apple's attempt to keep the professional computer users.
- Apple will officially sell the Mac Pro and the 32-inch XDR Pro screen was announced this year.

Apple Watch, AirPods and HomePod

- Last year the company changed the Apple Watch design, giving it a bigger screen so this year will be a minor upgrade version. This year we will have watchOS 6, and a few more versions with new materials, including ceramic and titanium.
- The new version of AirPods is expected to cost more than the current \$ 159, equipped with active water and noise resistance (ANC). This product will probably be launched next year, instead of the same day as the 2019 iPhones.
- In contrast to AirPods, the HomePod will have a cheaper version because the \$ 300 price seems too high for most users. The new version will have 2 tweeters instead of 7 as the current version.
