

# All the things you need to know about Control Center on iOS 10

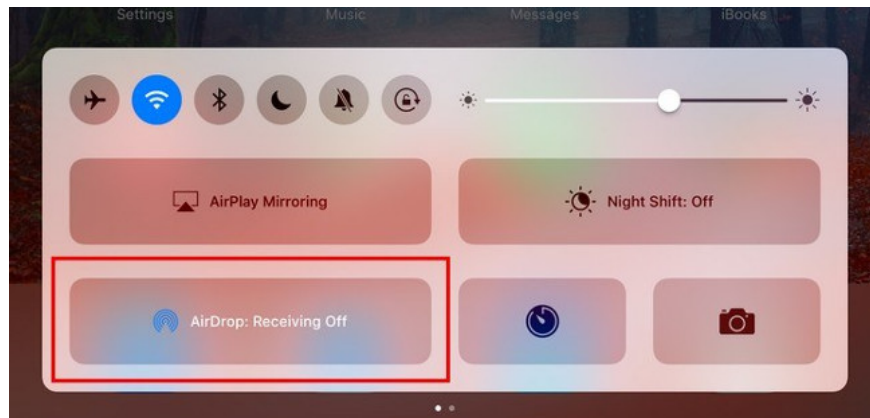

Control Center also known as control center on iOS 10 is a simple and quickest way to use some features. The following article will summarize all the things that you need to know about Control Center on iOS 10 operating system.

Control Center also known as control center on iOS 10 is a simple and quickest way to use some features. All you have to do is swipe up from the bottom of the screen, then the Control Center will automatically appear.

Thanks to Control Center you can use some features without having to open each application one by one. Not everyone knows all the features that Control Center offers. The following article will summarize all the things that you need to know about Control Center on iOS 10 operating system.

## Use AirDrop from Control Center

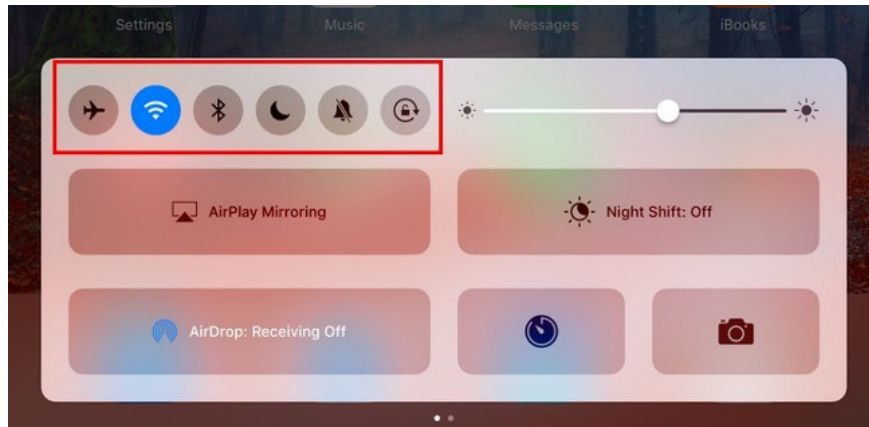

AirDrop is a feature on the iOS operating system that allows users to share movies, photos, contacts . for another AirDrop user. Its advantage is that it can share large videos quickly.

Open Control Center by swiping up from the bottom of the screen, then click on the AirDrop icon. Choose who can AirDrop for you. Also you can choose from people in your contacts or with everyone in the Bluetooth range.

## Turn on / off the airplane, Bluetooth, Do not Disturb, Silent and rotate devices

All of these features are neatly arranged on the top toolbar of the Control Center. Click on the icon that you want to open / off respectively. Also you can adjust the screen's brightness by using the drag bar on the Control Center.

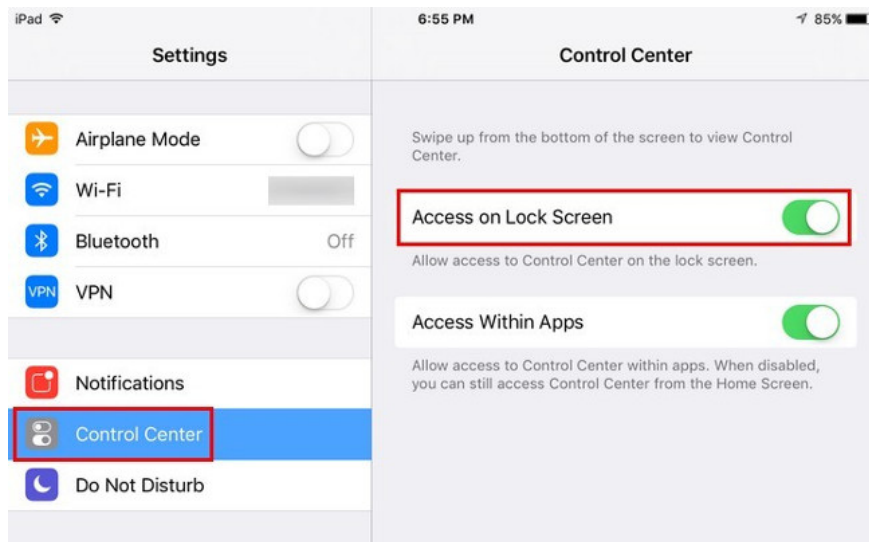

## Enable Night Shift, Timer and Camera features from Control Center

These useful features are all encapsulated on the Control Center. Using the Night Shift function will help the device automatically adjust the iPhone screen color when used at night to make it easier to sleep.

## Turn off Control Center on the lock screen

Although quite convenient in many cases, opening the Control Center easily even when you're locking the screen can make someone turn on or turn off or break the features displayed on the Control Center. If you do not want to happen this case, you can choose to turn off the Control Center panel on the lock screen.

Go to **Settings > Control Center** . Then turn off the **Access on Lock Screen** switch .

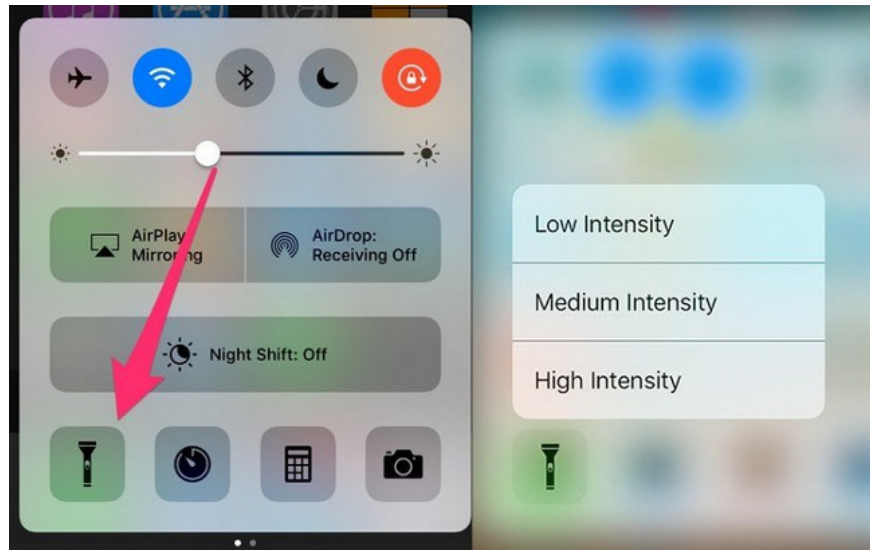

You will only be able to open the Control Center after unlocking the device.

## Turn on the light and computer (only available on iPhone)

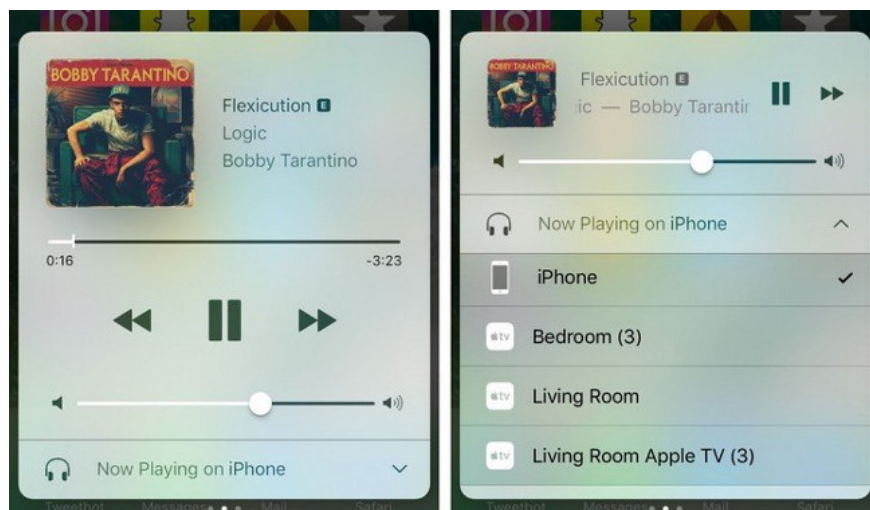

For iPhone, Control Center will have 2 more features that are turning on the flashlight and turning on the computer.

Also you can adjust the brightness of the flashlight by using 3D Touch on the icon. After pressing and holding the flashlight icon on the Control Center, you can choose between 3 options, the **Low Intensity** , **Medium Intensity** , and **High Intensity** .

## Music app control panel

You can open the music panel of the Music app on iOS by swiping from right to left at the Control Center. Here you can easily listen to the song you are listening to, move to another lesson, or even select the output of the device.
