

Amazfit Aeri self-sterilizing mask, supports unlocking the smartphone with the face even when wearing a mask

Worry about masks that limit facial unlocking on smartphones will no longer be available with a transparent mask model developed by Huami.

Since the outbreak of the Covid-19 epidemic, masks have become an object of separation to many people. But for those who own a smartphone that supports face unlock, a mask seems to be an obstacle because it is difficult for users to unlock the device screen with only half the face.

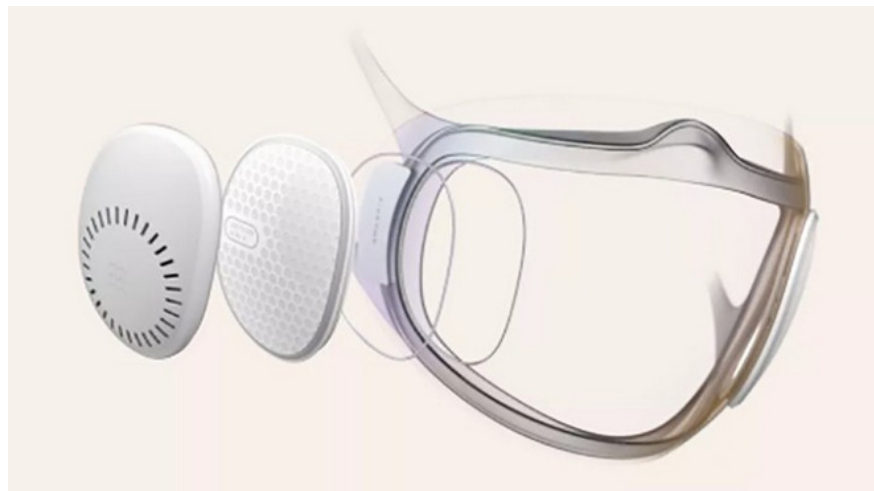

This is a headache for many iPhone users or Android smartphones that support face unlock. But this problem answered with the idea of ??a mask called the Amazfit Aeri.

When information about the mask made it difficult for smartphone users, Huami, a subsidiary of Xiaomi, announced that it was researching a mask that allows you to unlock the device with Face ID without having to remove the mask. .

Amazfit Aeri has a transparent design. Huami said that this mask is made of anti-fog material, which helps unlock the device easily without any obstacles. The mask even has built-in ultraviolet light for self-sterilization when you plug the USB Type-C cable into the connector on the side of the mask.

This unique mask uses removable air filters and lasts up to 6 weeks before needing to be replaced. The ability to reuse many of these filters is thanks to ultraviolet disinfection technology.

Usually an N95 respirator only has the best protection within 8 hours before replacing it. So a mask that has a reusable filter for more than a month is definitely good news.

However, it is important that Huami does not disclose whether the Amazfit Aeri respirator meets the standards of protection such as the N95.

Amazfit Aeri has a modular design, allowing users to add accessories such as eye masks or fans to wear during exercise without worrying about asphyxiation.

Huami said the company had started producing Amazfit Aeri prototypes but it would have to wait at least 6 months to a year for the product to be available on the market. This is a fairly long time but it is definitely necessary because it is not known when the pandemic will end and wearing a mask has long been a habit of Asian people.
