

# An application for controlling your computer using your iPhone or Android phone.

Currently, there are many applications that allow you to control a computer remotely via your phone. They are basically divided into two types – one is controlling via the PC screen on the phone, and the other is using a mouse, similar to remote control between two computers. Below is a list of the best applications for controlling a computer using your phone that you should consider.

You're probably familiar with or have heard of the term "computer control" or "Remote Desktop," but that refers to using one computer to control another. Now, you can use your phone to remotely control computers using apps. Using a phone to control a computer isn't much different from controlling a computer with another computer. However, the level of security and connection speed from your phone will be the main factors in evaluating the strength of the connection for controlling a computer from your phone.

Top apps for controlling your computer with your phone.

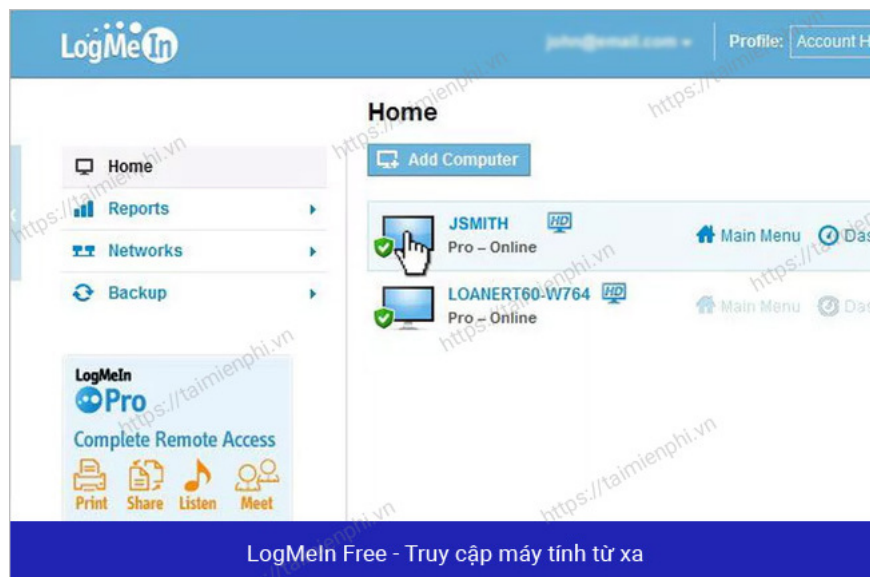

There are many software programs and applications available today that support connecting computers and phones. Using these tools, you can easily control your computer with your phone.

## 1. *ScreenConnect*

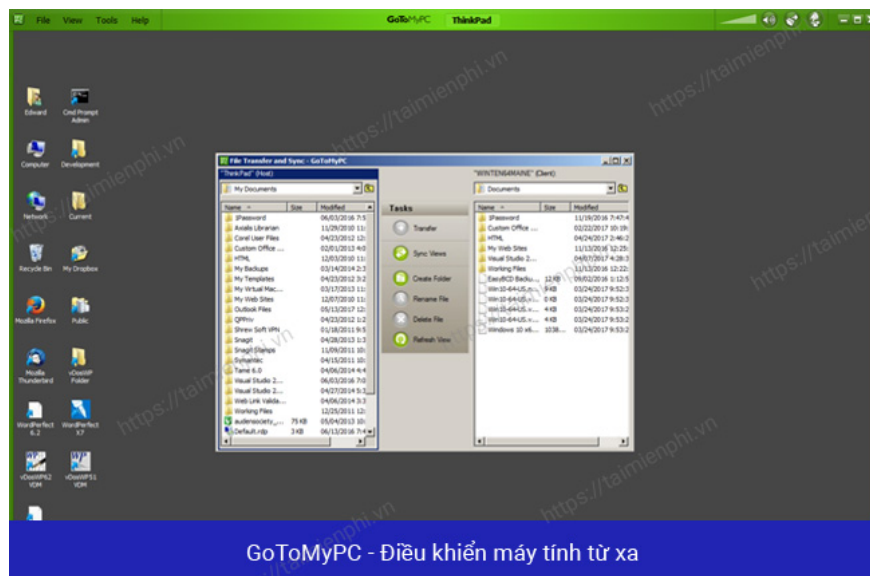

ScreenConnect software is an extremely effective solution for computer support technicians. Offering excellent features and high security, ScreenConnect is suitable for individual users, remote workers, and computer technicians.

## 2. LogMeIn

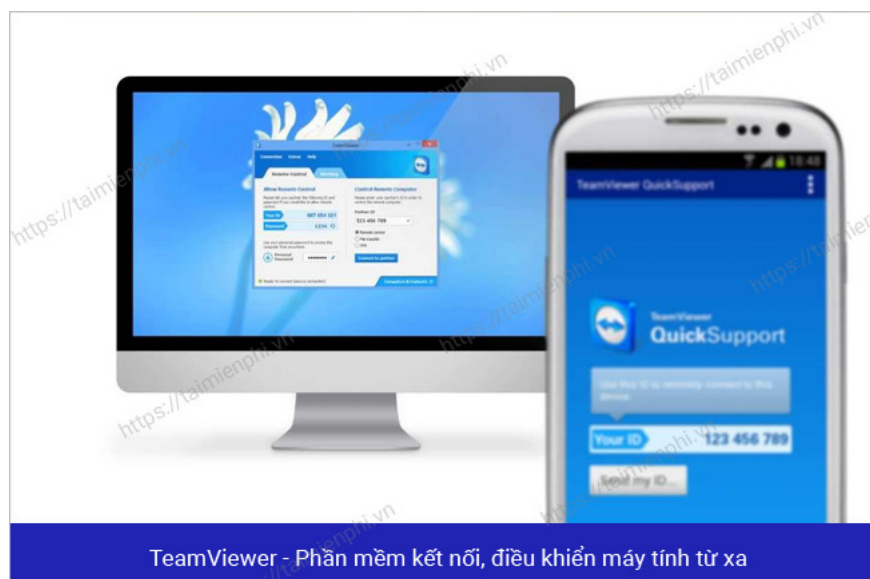

LogMeIn provides a high-speed and secure online control service. It supports connections between PCs and smartphones. Through this software, you can easily perform all operations on another device, such as viewing, presenting, and running programs. LogMeIn is an essential application for those who specialize in remote customer support. The software supports chat, address blocking, and many other outstanding features.

## 3. GoToMyPC

With its easy installation and usage, GoToMyPC is suitable for individuals who need to make simple edits and exchange information. GoToMyPC provides reports on computer usage and allows remote control via phone.

#### 4. TeamViewer

Many might be surprised by TeamViewer's position. While a very popular remote computer control tool, TeamViewer lacks robust security features and doesn't support IP or PC blocking. However, for simple needs, TeamViewer can still fully meet requirements, with virtually no lag and high performance.

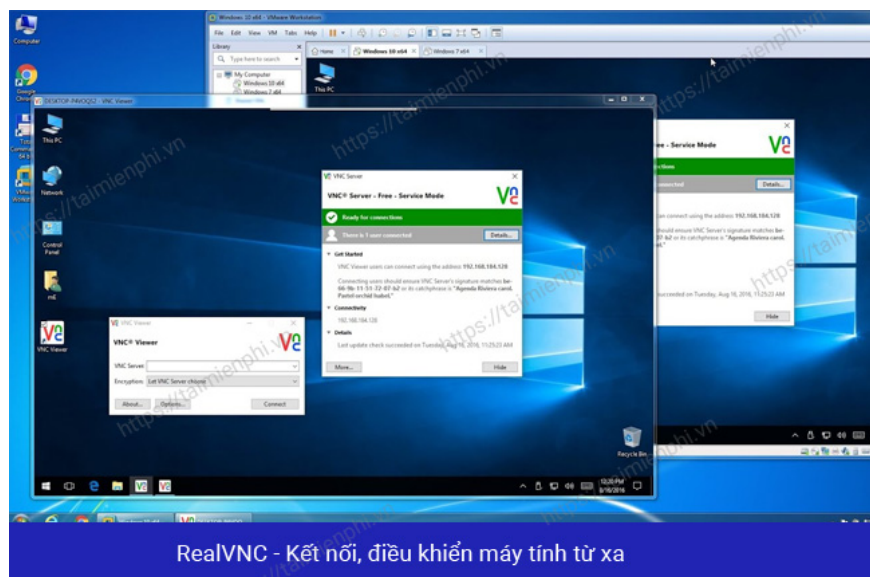

#### 5. Splashtop

Splashtop Streamer - Kiểm soát máy tính từ xa từ thiết bị di động

Installing Splashtop is very simple, yet the tool offers high security. With Splashtop, you can transfer data and control your computer using your smartphone with high speed and multi-layered security.

## 6. RealVNC

RealVNC - Kết nối, điều khiển máy tính từ xa

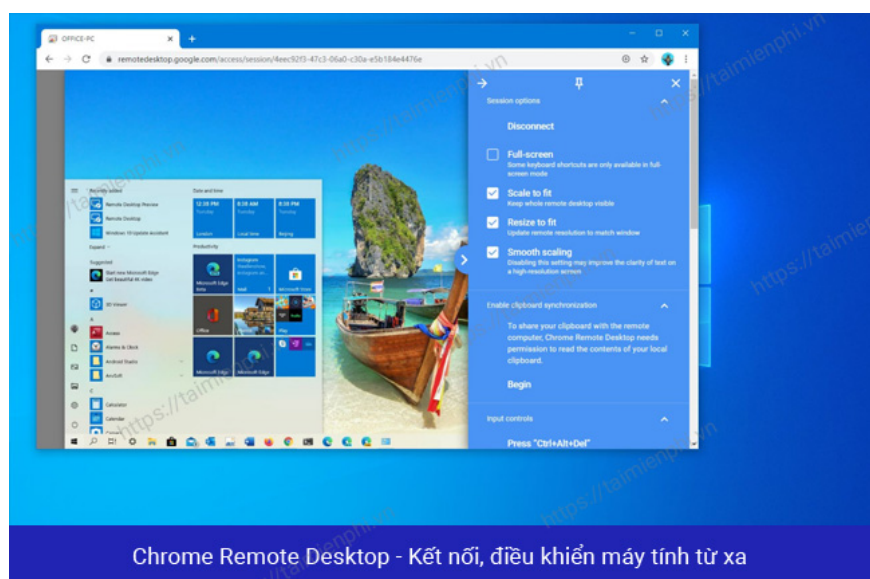

RealVNC supports controlling computers on multiple platforms including PCs, Macs, tablets, smartphones, and even web browsers. However, you must use the paid version of RealVNC to access all features and support.

## 7. NetShade

NetShade is a tool for secure web browsing without slowing down your Mac. Additionally, you can connect to the network and use bandwidth freely. NetShade allows you to use it as a VPN to encrypt connections. However, this tool is currently only available for installation on Mac and iOS devices.

## 8. Chrome Remote Desktop

Chrome Remote Desktop is an add-on for the Google Chrome browser, so it's not restricted by different platforms. Any platform that can install Google Chrome can use Chrome Remote Desktop. However, Chrome Remote Desktop lacks many security features and powerful computer control capabilities compared to other tools.

Above are 8 applications for controlling your computer with your phone, giving you more options for remote computer control. Although not mentioned in the article above, Unified Remote is also a fairly high-quality application for controlling computers via Android phones with basic computer control features.
