

Android 5.0 Lollipop has a serious error message

Accompanying a new operating system experience is ... countless errors. After performance errors due to data encryption, flash errors and silent mode errors, Nexus users have to receive a new error: the message is never sent to the recipient.

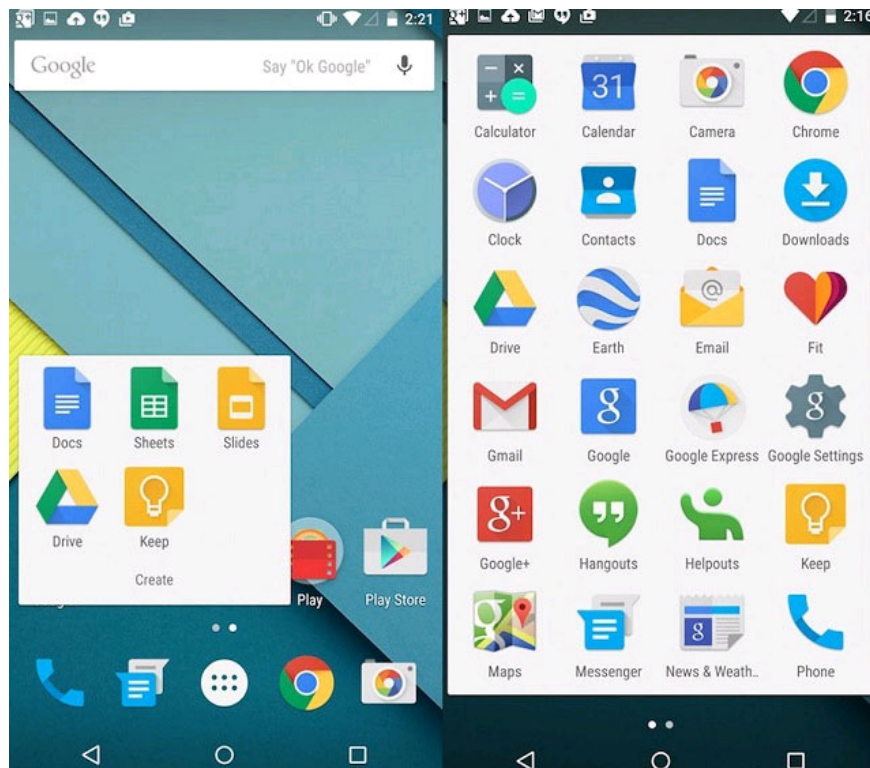

Accompanying a new operating system experience is . countless errors. After performance errors due to data encryption, flash errors and silent mode errors, Nexus users have to receive a new error: the message is never sent to the recipient.

According to *Business Insider* , this weird software error appeared initially in the Netherlands. SMS messages sent from **Nexus 4** and **5** that have been updated to **Android 5.0 Lollipop** will never reach the recipient, although the operating system does not report any errors and the user cannot recognize their message having trouble.

People who can't send messages say they can still receive messages from others. Initial information shows that this software error only occurs with specific networks (*Vodafone and Mobistar*) . In addition, at least one Moto X user said he had an error that could not send messages.

No information has been shown to indicate how many users have experienced this error. Some users offer "*tips*" to fix the error by deleting the international area code (*for example, replace +84 by 0*).

Android 5.0 Lollipop brings a very new experience and . countless errors

A user confirmed on the Google support page: *"I got this error. The messages sent were not sent to the recipient. According to Vodafone's survey, the operator found that the messages would be sent to power numbers. International phone has area code 111 (causing cost outside the contract) "*.

Another user said the error will no longer continue when users downgrade their smartphone to KitKat.

The above error message is reported on Google's *Issue Tracker (bug tracking and software issues)* page on November 16. Later, Google made a statement to a website in the Netherlands that said the Nexus 6 was also affected. The site claims Google has advised users to postpone updates to 5.0 Lollipop to avoid errors.
