

# Android application can be run on Windows Phone 8

Microsoft is planning to implement a rather bold idea to allow Android applications to run on Windows Phone platforms and Windows operating systems.

**Microsoft is planning to implement a rather bold idea to allow Android applications to run on Windows Phone platforms and Windows operating systems.**

Most likely in the future devices running Windows Phone can install Android applications

According to *TheVerge* on 13.2, this idea has received mixed opinions from Microsoft executives, some argue that this will help Windows Phone attract more users, but has the idea of "accepting the application of " rivals " running on your device are no different from killing Windows Phone.

It is known that the plan allows running Android apps on another platform previously used by BlackBerry on the **BlackBerry 10** platform, but BlackBerry failed to apply this method.

However, for Microsoft, this is completely different because the company is holding a lot of software systems, servers and great economic potential.

Currently, there is no detailed information on when the new Microsoft " latches " on the application of a method that allows Android applications to run on Windows Phone models.
