For smartphone users, accessing the Internet by Wi-Fi is very important. However, during Wifi connection, smartphone users often encounter some errors. Errors often encountered by users such as Wifi flickering, not catching signals, Wi-Fi connection without network access .

In the article below, Network Administrator will guide you how to fix the Android devices with Wifi connection.

To fix the fluttering Wifi connection on Android devices, follow the steps below:

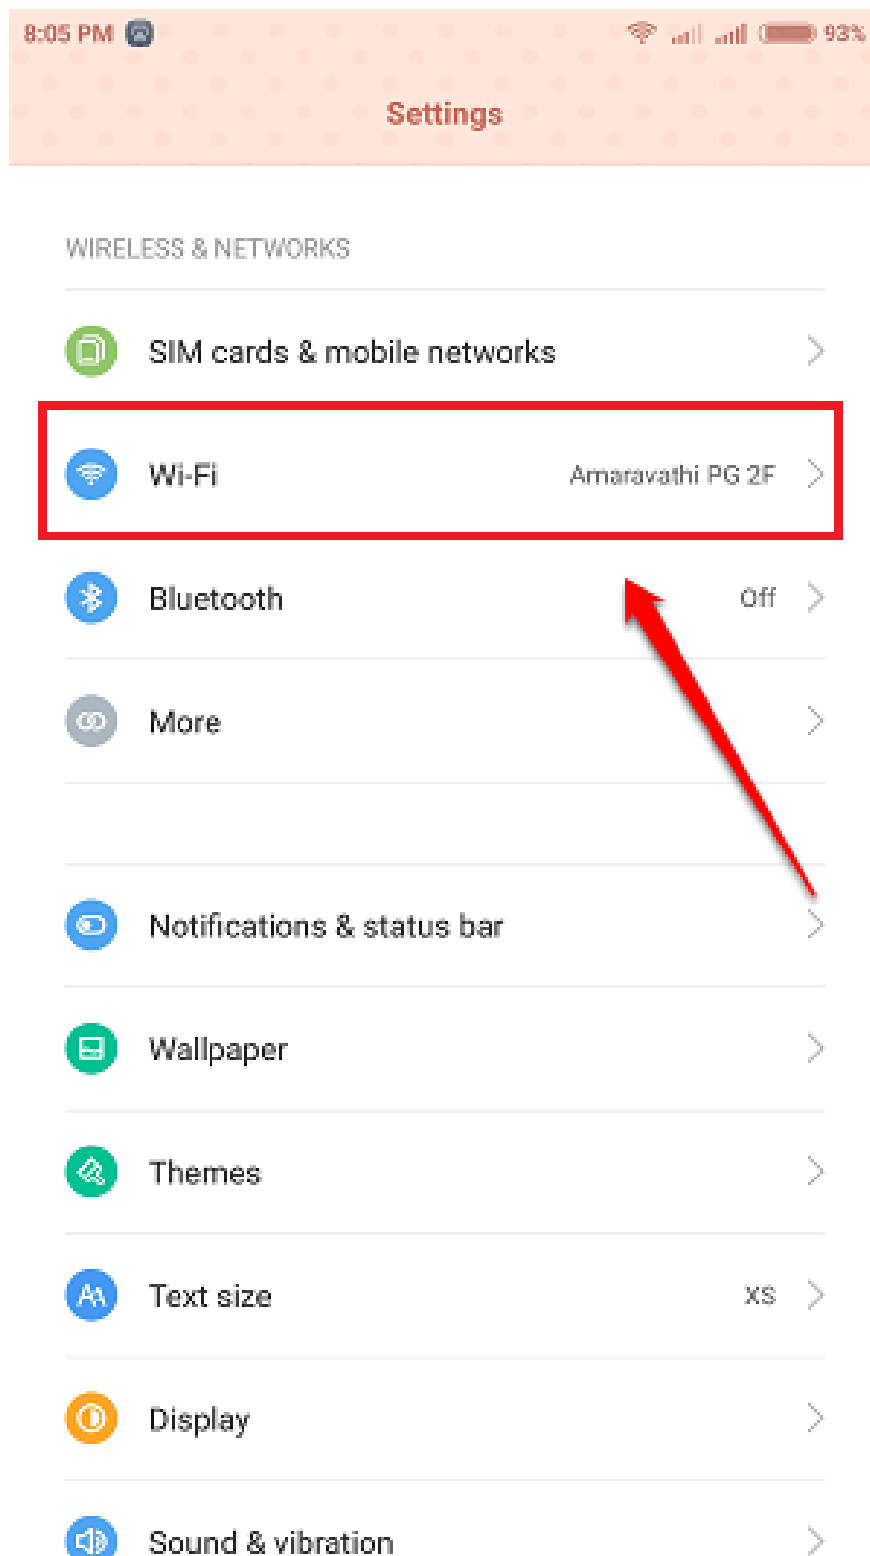

Step 1:

The first step is to open the **Settings** app on your Android device.

Step 2:

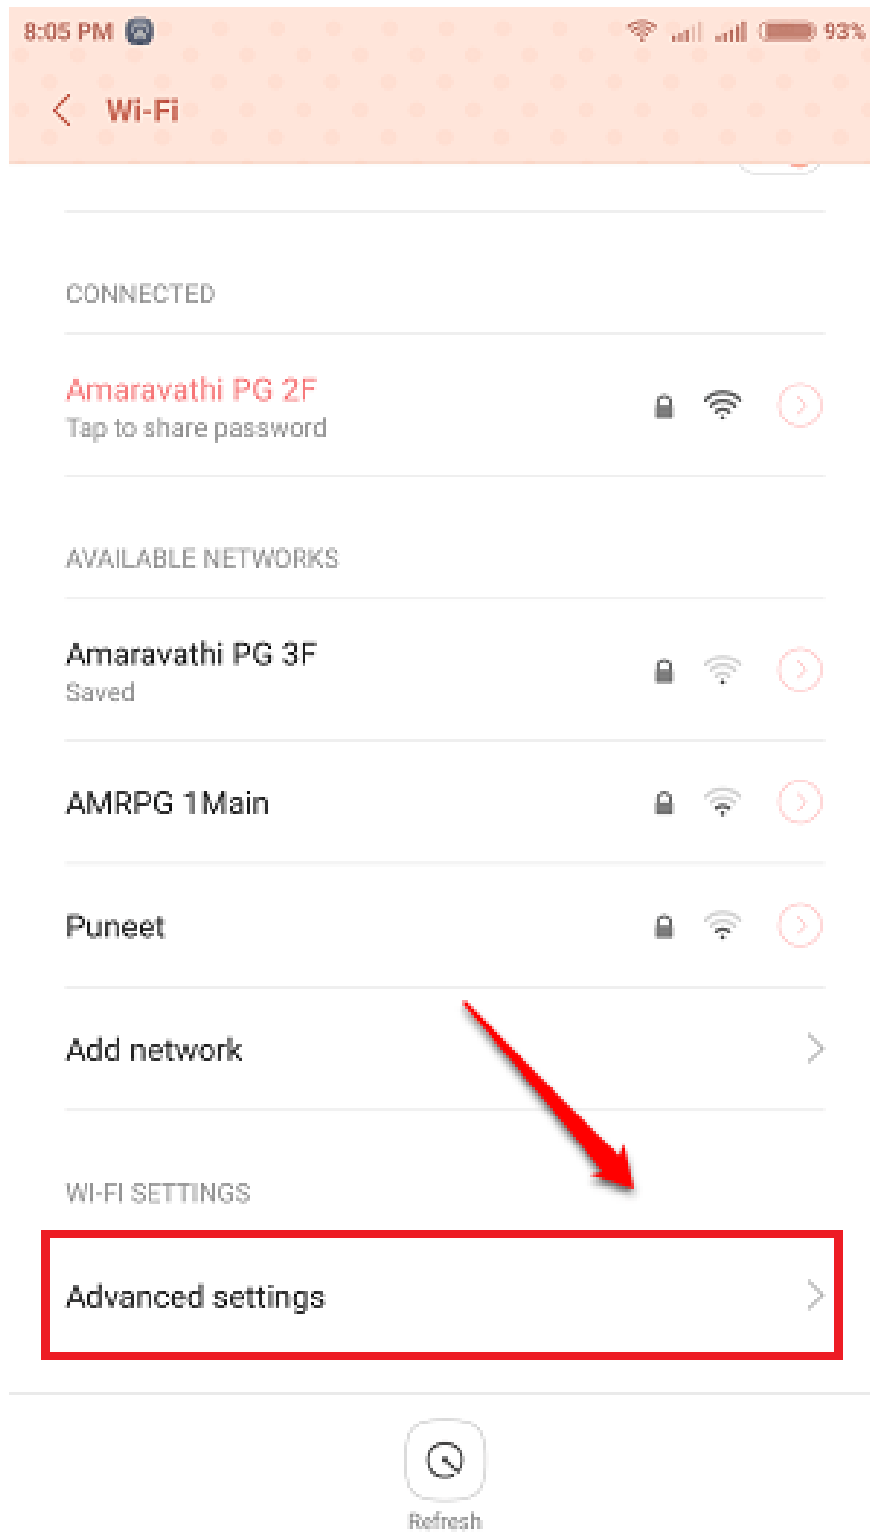

On the Settings application window, click **Wifi** to open the Wifi Settings window.

Step 3:

Scroll down to find and click the **Advanced settings** option.

On each Android line will have different interfaces. On some Android devices, you can access the Advanced Settings option by clicking the 3 dash line icon on the left side of your device screen.

Step 4:

On the Advanced settings window, look for an option called **Keep WiFi on during sleep** and click on the option.
