

Android history is fully expressed through short video

Android is the most pervasive operating system on every continent, installed on millions of smartphones, tablets, smart watches and many other devices around the world.

Android is the most pervasive operating system on every continent, installed on millions of smartphones, tablets, smart watches and many other devices around the world.

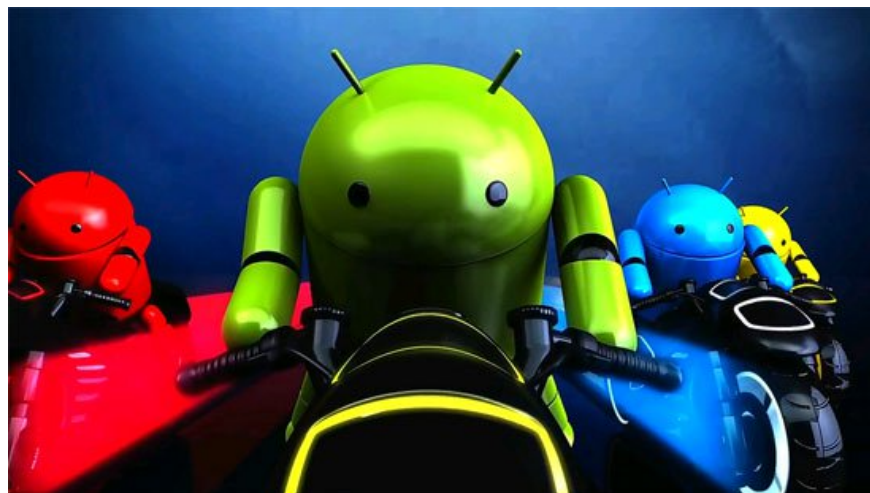

In 2008, after iPhone 2G had been raining for nearly a year, Google officially launched Android with the T-Mobile G1 or known internationally as HTC Dream. But Google's first *'dream'* is not like what we know about Android of the present time, slow, lag, user-friendly interface and especially bad. But it is not natural that Google is dubbed the *'giant'*. The company has consistently made improvements, bug fixes, and new features added over the past half decade. So we have a great Android like today.

A quick review of the Android version's history, Google has a tradition of naming your pet in Alphabet order and each time being a different dessert dish.

Starting with Android 1.5 Cupcake (*small scones*) in 2008. After 2 years is Android 2.0 Éclair (*scones covered with cream*). Android 3.0 Honeycomb (*honey cake*) launched as the first step of Google into the tablet market. Until the end of 2011, Android 4.0 Ice Cream Sandwich was considered the biggest leap in the interface of Android and also the operating system integrated between tablets and smartphones.

After many small updates, until 2013, Android 4.4 KitKat (*Kitkat cake*) was born marking the cooperation between Google and Nestle sponsor. And finally, Android Lollipop 5.0 - The fastest, most beautiful Android has been launched up to the present time.

It can be said, Android is present everywhere and like everything. Android not only appears on smartphones, tablets, but also on wearable devices, computers, cars and dozens of other devices. What is the next dessert that Google will entertain users? Only Google knows but millions of Android fans around the world are still waiting.
