

propagating campaigns or disinformation using the victim's geographic location details".

"These social techniques are highly effective in the digitally connected world, and are often used by cybercriminals to spread malware from one victim to another. The bad guys have used it. Some topics users find interesting like free Netflix voucher codes, Google AdWords coupon codes and voting games for the best team or player'.

Of course, there are no free Netflix or AdWords codes or vouchers, and no pro-soccer votes are taken. Instead, the malicious apps are just waiting to get Facebook login information when they want to log in to get the promotion. They will make a last-ditch effort to look legit by launching a message saying the coupon or code has expired, as shown in the screenshot below.

The researchers assumed that the malware came from hacker groups operating in Vietnam and said these people could distribute the trojan using Google Play and other app stores.

These are the applications that contain trojans:

1. GG Voucher (com.luxcarad.cardid)
2. Vote European Football (com.gardenguides.plantingfree)
3. GG Coupon Ads (com.free_coupon.gg_free_coupon)
4. GG Voucher Ads (com.m_application.app_moi_6)
5. GG Voucher (com.free.voucher)
6. Chatfuel (com.ynsuper.chatfuel)
7. Net Coupon (com.free_coupon.net_coupon)
8. Net Coupon (com.movie.net_coupon)
9. EURO 2021 Official (com.euro2021)

Google was sent a report of the malware, verified it and removed all relevant apps from the store, but the report notes that three of the apps are still available on the "store". third-party apps, not secure."
