

# Android releases updates via Google Play Store?

Google is starting to test the new Android update system on Google Play, to make it more convenient for users.

Google is starting to test the new Android update system on Google Play, to make it more convenient for users.

At the present time, Android update feature is integrated into each device. When an OTA update is available for the system, Android will automatically notify the user. To check, users can access the Settings application. However, depending on the manufacturer, the updated location may vary, making it difficult for users to find accessible places to handle.

In order to make it more convenient for users, Google wants to change the way the system is updated for Android. Starting from the Google Play Store app update version 14.5.52, currently being tested, Android system updates will also be available on Google Play Store just like any other regular app update. . This makes operating system updates available to all Android devices faster than before. Users can easily monitor the system update and when it needs updating, just click the Update button on Google Play Store.

Currently, new Google is testing how to update the system for Android, so there is no guarantee that it will be deployed to users.

Currently only the Linux operating system provides the option to update the system via the application.
