

Anker Eufy Homevac H11 handheld vacuum cleaner, top choice for small room cleaning.

Compact and lightweight, powerful suction, charged by Micro USB port, filterable and replaceable filter, priced at only 799K *

Eufy is a subsidiary of Anker, specializing in smart home and IoT products. The handheld vacuum cleaner series has just launched in Vietnam market in early June 2020 along with a number of other intelligent vacuum cleaners. Highlights of this handheld vacuum cleaner is the machine with very strong suction power, up to 5500Pa, rechargeable batteries via Micro USB port, there are 2 types with O3 removal (Eufy HomeVac H11 Pure) and without O3 removal (Eufy HomeVac H11), the machine in this article is O3-free.

Eufy H11 is equipped with a filterable and replaceable filter, which is a great point. According to the manufacturer's recommendations, we need to clean the litter box after every vacuuming, clean the dust filter every week (or every 2 weeks if you have a pet) and replace it every 6 months. The cleaning process is also very easy, just a slight rotation of the vacuum cleaner can be removed to clean.

The Eufy H11 is also sold with an extension, which allows us to suck in areas where the vacuum cleaner cannot be reached.

Eufy HomeVac H11 has a very compact design, weighing about 560g makes it very easy to hold and use, each charge will help us clean up to 13 minutes, completely enough time to clean the area. Area has a small area.

I used Eufy HomeVac H11 to clean the computer CPU and inside the family car, strong suction and clean very well, but with a suction time of only about 13 minutes, quite few for those who need a lot of cleaning. , if Eufy equips computers to use direct power (From USB or home power), it will be much better!
