

Answering frequently asked questions about Bootstrap

Bootstrap is a popular web and application development tool. To help you understand it better, TipsMake.com will compile and answer frequently asked questions about Bootstrap.

Bootstrap is a popular web and application development tool. To help you understand it better, TipsMake.com will compile and answer frequently asked questions about **Bootstrap** .

How to open a dropdown menu with mouse hover instead of clicking in Bootstrap?

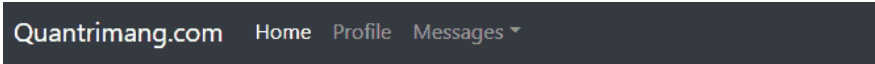

Answer: Use the method `jQuery hover()`

By default, to open or display a dropdown menu in Bootstrap, you have to click on the trigger element. However, if you want to display the dropdown menu when hovering your mouse over it instead of clicking, you can do so with a small tweak using CSS and jQuery.

For example:

Activate Bootstrap Dropdown with Hover

TipsMake.com ■ Home Profile Messages Inbox Sent Drafts

Quantrimang.com Home Profile Messages ▾

As you can see, the example uses CSS media queries to display the dropdown menu when hovering the mouse over small, medium, and large devices, as it's not suitable for smaller devices like phones. Additionally, some jQuery classes are added to highlight the dropdown menu.

How do I add a Bootstrap tooltip to an icon?

Answer: Use `.tooltip()`

You can use Bootstrap tooltips on Glyphicons just like you would with other elements. First, add the data attribute `data-toggle="tooltip"` to `data-original-title="Text"` the icon element, and finally, initialize the tooltip using Bootstrap's `.tooltip()`.

Additionally, you can place these icons inside the element if you want to link it or implement certain tasks with them.

For example:

Example of Bootstrap Glyphicons with Tooltip

Note: Hover your mouse over the icon to see the tooltip.

Note: Đặt trỏ chuột trên icon để thấy tooltip.

How do I add an icon to the registration or submit button in Bootstrap?

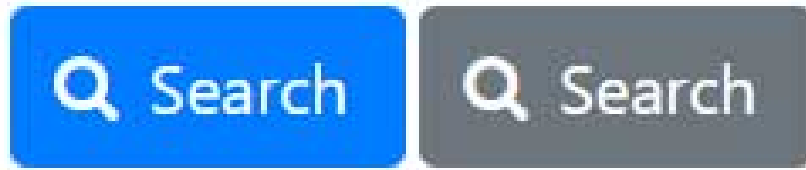

Answer: Use CSS Properties

Because it's an empty element, you can't place an HTML icon directly inside the input button as you would with buttons using `<input type="button" value="Submit" />`.

However, you can place the Glyphicon outside the input button and push it inside to create the effect of the icon being placed inside the button itself using CSS positioning techniques.

Try the following example to understand the basic workings:

Creating the Bootstrap Input Buttons with Icons

How do I align a Bootstrap modal vertically to center it?

Answer: Use CSS properties `margin-top`

By default, Bootstrap windows are aligned towards the top of the page with some margins. However, you can center the modal vertically using a simple JavaScript trick as described in the example below. This solution dynamically aligns the modal and keeps it centered on the page even when the user resizes the browser window.

For example:

Center Align Bootstrap Modal Vertically M? Modal m?u

Confirm

Do you want to save the changes to the TipsMake.com document before closing?

If you don't save, the changes you just made will be lost.

?óng

Save changes

How do I embed a YouTube video into a Bootstrap modal?

Answer: Insert the YouTube code into the body of the modal.

You can easily embed or place YouTube videos inside a Bootstrap modal, just like you would on a regular website. Simply take the code to embed the YouTube video and place it inside the `.modal-body` element. However, there's a small problem. The YouTube clip doesn't automatically stop when you close the modal window. It will continue playing in the background.

To solve this problem, you simply need to convert the URL value of the YouTube clip iframe - the `src` attribute - using jQuery. For example:

Example of Embedding YouTube Video inside Bootstrap Modal `M?modal m?u`

YouTube Video

How do I change the default width of a modal box in Bootstrap?

Answer: Set the width of the element using `.modal-dialog`

By default, Bootstrap modals come in four different sizes – small, default, large, and extra large. However, if you still want to customize the size of this modal window, you can override the CSS width property of the class `.modal-dialog` to adjust the modal to its default size.

Similarly, you can override the width property of the class `.modal-lg` to `.modal-xl` to adjust the size of each modal dialog box accordingly, from small, large, and extra large.

The following example will show you how to change the width of the default modal:

Example of Resizing the Bootstrap Modals `Hi?n modal m?c ??nh`

Default Modal

×

The default modal size has changed to 600px. It is now 100px wider than the previous 500px modal.

Ok, tôi hi?u

Hiện modal mặc định

How do I insert a close button in a Bootstrap popover?

Answer: Use the HTML options of `popover`.

You can use Bootstrap's `popover` option `html` to insert a close button inside the popup window. Alternatively, you can use the `popover('hide')` method to hide the popup window when the user clicks the close button. Try the following example and see the result:

Bootstrap Popover with Close Button Click Me

Additionally, if you want to show/hide the Bootstrap popover using your mouse cursor instead of clicking, simply use the option `trigger`. For example:

Display Bootstrap Popover on Mouse Hover Popover Another popover
Large popover Last popover

Above are some frequently asked questions about using Bootstrap. If you have any questions about Bootstrap, feel free to share them with [TipsMake.com](https://tipsmake.com) readers and let's find the answers together!
