

Anti-theft solution for laptops

Previously, losing a laptop (laptop) always meant losing important data of users on it. However, users now have many methods to save this image, can regain control of important data on it.

Previously, losing a laptop (laptop) always meant losing important data of users on it. However, users now have many methods to save this image, can regain control of important data on it.

According to Ponemon Research, the leading cause of data leaks is stolen or lost mobile devices. Estimated, the average cost of an important global data leak is about \$ 3.4 million. So far, people have probably figured out how big the loss of mobile devices, especially laptops, is.

Data encrypt

In any case, the " *room is better than the anti* " - therefore, many experts recommend that users need to proactively encrypt important data on the laptop, in case the thief gets the device also is inaccessible. into internal data.

Currently on the market and a number of firms are offering solutions to this problem. It is often heard of Intel's Anti-Theft Technology. The world's largest chip maker announced that it will partner with Ericsson telecom, developing a data protection system and monitoring stolen laptops, via mobile communications as well as technology. GPS navigation. Intel Anti-Theft Technology allows users to lock computers remotely, and prevent unauthorized access to stolen computers via SMS.

In addition to Intel, Symantec is also a leader in providing encryption solutions for mobile device users. The company's Full Encrypted PGP (Full Disk Encryption) drive is also integrated with Intel's anti-theft technology (inherent in Core i5 and i7 processors). As expected, this encryption product will be launched in the future.

In addition, Symantec also provides some other encryption products such as Endpoint Encryption terminal encryption Removable Storage Edition - version for external storage devices, integrated with data loss protection features Data of Symantec (Data Loss Prevention); Endpoint Encryption Device Control Device Control Device terminal control software; and the latest version for all Symantec Endpoint Encryption drives Full Disk Edition. These products support multiple platforms, including Windows, Mac OS X, Ubuntu, Red Hat Linux, Windows Mobile, and BlackBerry, .

Find the stolen laptop again

The above are some preventive solutions when a user loses a laptop. However, if the user has been equipped with the precautionary measures above, the leak of information when a laptop is stolen will never happen. In addition, they can control that computer when they are in the hands of the bad guys.

In case of losing a laptop, users can use some tracking solutions to control and prevent bad guys from accessing data on the computer, or can track the laptop's current location. In many cases, thanks to this function the owner has found the laptop again.

For monitoring, users can use LockItTight software. LockItTight can track your laptop's current location, as well as take screenshots and webcams and send them to your account on the web.

Also with the function of retrieving a stolen laptop, users can use Prey free software. Prey has the ability to take webcam pictures or alert and send emails to notify the owner of the stolen laptop.

Adding another software also has the function of retrieving the laptop, which is Adeona. This is a free program that allows monitoring your computer if it is lost.
