

Apex Launcher updated with new Material Design design

On the Play Store there are thousands of launcher apps for Android devices, but it seems Nova and Apex Launcher are still one of the popular choice as well as favorites from users. Apex Launcher today received a new update with a redesigned user interface in Material Design.

On the Play Store there are thousands of launcher apps for Android devices, but it seems Nova and Apex Launcher are still one of the popular choice as well as favorites from users. Apex Launcher today received a new update with a redesigned user interface in Material Design.

Along with the new interface, the application icon is also designed according to Material, Lollipop Drawer background and completely new effects. Besides, the launcher is also inspired by Lollipop's other items including: folders, search bar, animation effect and drawer icon.

Apex Launcher also provides users with a new speed option (*under Advanced Settings*) that you can adjust the speed between home screen and drawer pages. A number of new interface and enhancements are also included in the upgrade.
