

# APG fiber optic cable has been repaired, Internet capacity goes to international recovery 100%

The shift of the APG submarine cable route in Singapore has been completed faster than expected, the quality of international Internet access in Vietnam has been restored 100%.

The shift of the APG submarine cable route in Singapore has been completed faster than expected, the quality of international Internet access in Vietnam has been restored 100%.

According to the notice from 0:00 on January 6 to 22:00 on January 7, the APG submarine cable route in Changi-Singapore will be teleported. But the work was completed two days earlier than expected, and at 15:45 on January 6 this cable was back to normal. Currently, this cable has restored 100% of traffic.

Meanwhile, from January 6 and January 9, AAG, the important cable connecting to the Internet in Vietnam goes to other countries to reconfigure the source, this new cable works stably again.

Previously, operators announced to customers, international Internet connection traffic on APG and AAG sea cable lines could be temporarily interrupted because APG will conduct cable relocation in Singapore to serve Expand Singapore's Changi Airport and on this occasion also handle incidents that occur on the connection-oriented AAG branch line from Vietnam to Singapore.
