

Appear Nokia phone 'brick' running Android 8.1

This phone can use Google Maps, which may be the Android Go version of the application.

User @ farmerbb1 recently posted a video on Steemit showing that Nokia has developed a feature phone that runs on Android 8.1. Because the device does not use a touch screen, to control between application icons on the device, users will use the keys on the phone.

This phone can use Google Maps, which may be the Android Go version of the application. It still uses 4G LTE technology and has Google Assistant.

Previously, Nokia has revealed images of a popular Android phone and the leaked video this time helps us get more detailed information about this device. According to the author of the article, details about this device will be announced on October 15, at the same time the Made by Google event with the launch of the Pixel 4 and Pixel 4 XL.

Let's wait until October 15, hoping that we will have more information about this 'brick' Nokia phone running Android 8.1.
