

Appears on the back of Redmi 9, confirms there are 4 cameras, purple version, priced below \$ 130?

A few weeks ago, Redmi launched Redmi Note 9 Pro and Note 9 Pro Max. And to continue the line, Redmi is expected to launch the next version of the cheap Redmi 9 line in the near future.

According to a leak from a Twitter account called Sudhanshu Ambhore, the Redmi 9 will be a MediaTek-powered smartphone.

Specifically, the tweet of Sudhanshu Ambhore has revealed, Redmi 9 will use MediaTek Helio G80 chip. This is the same chip on the recently announced Realme 6i.

In addition, Redmi 9 is expected to come with 3GB RAM and 32GB internal memory. It will also have 4GB RAM variant and 64GB internal memory. This is the most basic configuration of most cheap smartphones today.

Despite being a budget smartphone, Redmi 9 has most of the characteristics of a mid-range smartphone today. Specifically, the device has up to 4 rear cameras with 13MP main camera, 8MP ultra wide camera, 5MP macro camera and 2MP depth camera.

It can be seen that Redmi is very willing to play in bringing the latest technology to even the low-end smartphones of this sub-brand.

A leaked image of the back of the Redmi 9 shows a lot of inspiration from the previously launched Redmi K30 model, such as the rear camera assembly arranged vertically and in a circle.

However, instead of using an in-display fingerprint sensor, the Redmi 9 only has a fingerprint sensor on the back. In addition, Redmi 9 is expected to feature an 8MP selfie camera, a 5,000mAh battery and a 10W charger.

In the image you can see the Redmi 9 has a purple version. According to many leaks, Redmi 9 will have a green variant. Price may be under USD 130.
