

# Apple finished the 15-inch MacBook Pro, focusing on high-end models

After the launch of the first MacBook Pro with a Retina display last year, Apple brand fans predicted that one day the Apple Apples would end up with the regular MacBook Pro, which is only equipped with a low-resolution screen. .

**After the launch of the first MacBook Pro with a Retina display last year, Apple brand fans predicted that one day the Apple Apples would end up with the regular MacBook Pro, which is only equipped with a low-resolution screen. .**

And what must come, the MacBook Pro line usually only has a choice of 13-inch screens.

At the last event, Apple representatives only focused on the upgrade for the MacBook Pro Retina display with the most powerful Intel Haswell processor line as well as the appearance of OS X Mavericks operating system. However, the Apple family did not mention anything about the MacBook Pro, which was very successful in the past.

These devices do not have super-high resolution screens but are equipped with DVD drives and some familiar connectors like Ethernet as well as FireWire, which are quite user-friendly.

On Apple's product introduction site, customers only choose the MacBook Pro with a 13-inch screen. By eliminating the 17-inch and 15-inch models, Apple has shown their focus on the Retina-equipped MacBook Pro as high-resolution trends are increasingly popular.

The 13-inch MacBook Pro usually doesn't have any hardware upgrades either, but the only change that might be in the **OS X Mavericks** upgrade is free download.

Besides, just an additional **\$ 100**, users can choose for themselves the MacBook Pro with 13-inch Retina screen for nearly **1300 USD** . With this option, we will have a 128 GB high-speed SSD instead of HDD, Intel Haswell processor, and Wi-Fi standard ac inside a lighter and slimmer body.
