

Apple ID is enhanced with security

Manufacturer of iPhone, iPad forces users to log into Apple ID account through two layers of passwords.

Manufacturer of iPhone, iPad forces users to log into Apple ID account through two layers of passwords.

After logging in to Apple ID as the traditional way, users will be sent an SMS with a 4-digit password. After that, they must enter this code to confirm it before they can use Apple ID-needed applications such as iTunes, App Store or iBookstore.

Two-step verification for Apple ID.

Two-step verification will require you to verify your identity using one of your devices before you can make changes to your account or make an iTunes or App Store purchase from a new device.

You enter your Apple ID and password as usual.

We send a verification code to one of your devices.

You enter the code to verify your identity and complete sign in.

You will also get a **Recovery Key** for safekeeping which you can use to access your account if you ever forget your password or lose your device.

No, Thanks

Steps to login to Apple ID in a new fashion. *Photo: ZDNet* .

According to *ZDNet* , using two new password layers will make security questions no longer needed, especially in case the user needs to reset the password for Apple ID. If you forget your password or lose your device, users will receive a 14-digit recovery code to access their account.

Apple said **users must be responsible for remembering their login password, recovery code and making sure their devices are safe. If they lose two of these three important information, they can lose control of Apple ID and must create another account** . However, the company also said that if users still remember the Apple ID password, they could still create a new recovery code via the My Apple ID website.
